ASX Announcement

15 APRIL 2011

SYAMA OPERATIONS UPDATE

Resolute Mining Limited advises of the completion of the previously announced planned maintenance shutdown at its Syama operations.

Milling has recommenced with the shutdown successfully being finished on time with all planned work completed.

The completion of the planned April maintenance shut is an important step for the Syama operation as the issues that have been addressed will further improve the reliability of the processing plant allowing annual design throughput to be achieved.

A six week direct leach ore campaign has now commenced which will allow maintenance work also to be undertaken on the sulphide section of the plant, including some refractory replacement in the roaster and inspection of the stack.
