Bega Cheese Secures Landmark Cheese Deal with Coles

Iconic Australian dairy processor Bega Cheese Limited has struck a landmark deal to supply the entire range of house brand cheese to all Coles supermarkets.

The new, five-year arrangement, further evidences Bega Cheese's ability to create strong relationships with key business partners.

Bega Cheese CEO Aidan Coleman said that the contract was a growth opportunity for the company. This means Bega Cheese will be sourcing an extra 70 million litres of Australian milk, representing \$30 million of additional milk to be purchased.

"This new contract with Coles means that we will be sourcing additional milk from our 400 dairy farmers across New South Wales and Victoria," Mr Coleman said.

"We will also be intending to take on around another 70 farmers to become part of our high quality milk network".

Mr Coleman said the Coles contract would generate added investment and jobs in the dairy industry, and drive innovation.

"Bega Cheese plans to expand their Coburg plant in Melbourne to meet the contract requirements, which will also create 30 new roles across the company".

Coles Merchandise Director John Durkan said Coles, as part of its "Australian First" sourcing initiative, wanted to enter a partnership that saw all its Coles brand cheese made in Australia.

"Coles was very keen to partner with an Australian dairy industry processor who could produce all of our cheese locally, and not rely on imported product," Mr Durkan said.

"I'm very pleased that Bega Cheese will now be producing 19,000 tonnes of great quality Coles cheese each year".

"This contract is great news for both Bega Cheese and the Australian dairy industry, and further underlines Coles' commitment to develop long-term, mutually beneficial partnerships with Australian rural producers."

Bega Cheese will begin producing Coles brand cheese from February 2012.
