E&A Contractors Secures Contract for Manufacture of 20 Wind Towers for Snowtown II Project

E&A Limited previously advised that its subsidiary E&A Contractors Pty Ltd was working collaboratively with Siemens Ltd in order to gain Siemens' international procurement accreditation status.

The achievement of this accreditation was a pre-requisite for the contract award by Siemens for the supply and manufacture of 20 wind towers at its Whyalla fabrication facilities for the Snowtown II Wind Farm Project.

E&A Limited, Executive Chairman, Mr Stephen Young, said "E&A is pleased to announce that E&A Contractors has officially been approved as a Siemens accredited supplier and consequently been awarded the contract by Siemens to manufacture 20 wind towers for the Snowtown II Wind Farm Project."

Mr Young acknowledged the significant efforts invested by E&A Contractors management team, led by Mr Mike Lewis, Chief Executive of the Renewable Energy Division and also the commitment, support and guidance provided by Siemens in assisting E&A Contractors to achieve the necessary international supplier accreditation status in such a short time period.

Mr Lewis said "that the E&A Contractors Renewable Energy Team is committed to fabricating the 20 wind towers for the Siemens contract, which once delivered will firmly establish E&A Contractors as a key supplier nationally to the wind energy sector."
