

INVESTMENT HIGHLIGHTS

- Developing a major coking coal province:
 - Amaam 412Mt total Resource: 349Mt Inferred^B & 63Mt Indicated^C
 - Amaam North: 30-430Mt Exploration Target^D
 - Combined Resources and Exploration Target of over 1Bt
- Amaam:
 - Project 25km from planned port site and only 8 days shipping to China, Korea and Japan
 - High vitrinite content (>90%) coking coal with excellent coking properties
 - PFS due Q1 2013
- Amaam North:
 - Resource definition drilling underway
 - Project 35km from existing Beringovsky coal port
 - Potential for low capital and operating cost production from thick seams of direct shipping quality coking coal

Mining Licence received for Amaam**TIG exercising right to increase ownership
of Amaam to 60%****Highlights:**

- Following recent approval of TIG's Mining Licence application by Rosnedra (Russian Federal Subsoil Agency), the Chukotka Branch of the Federal Subsoil Agency Chukotnedra, has issued TIG's Russian subsidiary company NPCC with a Mining Licence over the area covered by its mining licence application for Amaam
- Issuance of the Mining Licence now enables TIG to exercise its right to increase ownership of NPCC and the Amaam project to 60%. Amaam North remains 80% owned by TIG
- Achieving this major milestone on schedule clearly demonstrates the high level of support NPCC has received for the Amaam Project from both the Russian Federal and Chukotka Regional Governments and highlights TIG's ability to effectively operate in Chukotka.
- The Amaam Prefeasibility Study is in its final stages with completion confirmed for the end of March 2013. TIG expects to announce the key findings of the PFS in early April

Chukotka Subsoil Agency, Chukotnedra, has issued the Amaam Exploration and Mining Licence

TIG is pleased to report that Chukotnedra, the Chukotka branch of the Federal Subsoil Agency, has now issued TIG's Russian subsidiary North Pacific Coal Company (NPCC) with a Mining Licence covering the area over which it has applied. This completes the major step in permitting of a mining project at Amaam, and enables TIG to progress towards mining and further delineation of coal Resources in the part of the Amaam deposit covered by the Licence. This initial Licence covers approximately 40% of Area 3 which is targeted for early life open pit mining. It contains 36.5Mt of Indicated Resources^C and 117Mt of Inferred Resources^B.

As sufficient additional drilling and study work is completed to convert Resources into Reserves for inclusion in the mine plan, TIG will apply for a Mining Licence(s) covering the remainder of the Amaam coking coal deposit. Total Amaam Resources currently comprise 412Mt of coking coal.

TIG ownership of Amaam now increases to 60%

TIG's current beneficial ownership of Amaam is 40%. The issuance of the Mining Licence now enables TIG to exercise its right to move to 60% ownership, which it will do immediately. TIG will move to 80% ownership upon completion of a Bankable Feasibility Study. Amaam North remains 80% owned by TIG.

Amaam Prefeasibility Study Update (PFS)

The Amaam Pre-feasibility Study is progressing well and is in its final stages. The draft of the PFS report is now under review by management and a summary report of the key aspects is expected to be announced to the market in early April 2013.

AMAAM COKING COAL PROJECT

Tigers Realm Coal is earning up to 80%^A in the Amaam Coking Coal Project which is located in the Chukotka Province of far eastern Russia. The Amaam Coking Coal Project consists of two tenements: Amaam (TIG owns 40%, earning to 60% on the granting of a mining licence, and 80% on completion of a BFS) and Amaam North (TIG owns 80%).

About Tigers Realm Coal Limited (ASX: TIG)

Tigers Realm Coal Limited ("TIG", "Tigers Realm Coal" or "the Company") is an Australian based resources company. The Company's vision is to build a global coking coal company by rapidly advancing its projects through resource delineation, feasibility studies and mine development to establish profitable operations.

Competent Persons Statement

The information compiled in this Presentation relating to Exploration Results or Mineral Resources is based on information provided by TIG and compiled by Neil Biggs, who is a member of the Australasian Institute of Mining and Metallurgy and who is employed by Resolve Geo Pty Ltd. Neil has sufficient experience which is relevant to the style of mineralization and type of deposit under consideration and to the activity he is undertaking to qualify as a Competent Person as defined in the JORC Code. Neil Biggs consents to the inclusion in the Presentation of the matters based on his information in the form and context which it appears.

Note A – Tigers Realm Coal's interests in the Amaam Coking Coal Project

Amaam tenement: TIG's current beneficial ownership is 40%. TIG moves to 60% upon a license being issued that grants Northern Pacific Coal Company (the license holder) the right to extract coal from Amaam; and 80% upon completion of a bankable feasibility study and cancellation of all loans made by TIG and its subsidiaries to Eastshore Coal Holding Limited (TIG is funding exploration and development by way of loans to Eastshore), the 100% parent of the license holder.

Amaam North tenement: TIG has now moved to 80% beneficial ownership of the Russian company which owns the Amaam North exploration license, Beringpromugol LLC, by acquiring 80% of Cyprus company Rosmiro Investments Limited from its current owner BS Chuchki Investments LLC ("BSCI"). In consideration for the acquisition, TIG has made a cash payment to BSCI of US\$400,000. TIG has also agreed to fund all project expenditure until the completion of a bankable feasibility study. After completion of a bankable feasibility study each joint venture party is required to contribute to further project expenditure on a pro-rata basis. BSCI is also entitled to receive a royalty of 3% gross sales revenue from coal produced from within the Amaam North license.

Note B – Inferred Resources

According to the commentary accompanying the JORC Code, "the Inferred category is intended to cover situations where a mineral concentration or occurrence has been identified and limited measurements and sampling completed, but where the data are insufficient to allow the geological and/or grade continuity to be confidently interpreted. Commonly, it would be reasonable to expect that the majority of Inferred Mineral Resources would upgrade to Indicated Mineral Resources with continued exploration. However, due to the uncertainty of Inferred Mineral Resources, it should not be assumed that such upgrading will always occur. Confidence in the estimate of Inferred Mineral Resources is usually not sufficient to allow the results of the application of technical and economic parameters to be used for detailed planning. For this reason, there is no direct link from an Inferred Resource to any category of Ore Reserves. Caution should be exercised if this category is considered in technical and economic studies."

Note C – Indicated Resources

According to the commentary accompanying the JORC Code "An 'Indicated Mineral Resource' is that part of a Mineral Resource for which tonnage, densities, shape, physical characteristics, grade and mineral content can be estimated with a reasonable level of confidence. It is based on exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes. The locations are too widely or inappropriately spaced to confirm geological and/or grade continuity but are spaced closely enough for continuity to be assumed. An Indicated Mineral Resource has a lower level of confidence than that applying to a Measured Mineral Resource, but has a higher level of confidence than that applying to an Inferred Mineral Resource."

Note D – Exploration Target

The exploration target is based on drilling and associated exploration studies undertaken so far. The potential quality of the exploration target is conceptual in nature, and there has been insufficient exploration to date to define a mineral resource within the meaning of the 2004 edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves" ("JORC Code"). Furthermore, it is uncertain if further exploration at its exploration target will result in the determination of a mineral resource.
