Highlights for the quarter ending 31 December 2013

- Logistics study commenced to evaluate transport options for potential Magnetite Range Iron Ore joint venture

Capital Structure	
Ordinary Fully Paid Shares @ 31 December 2013	181,000,233
12 month high-low	$0.24 - $0.15

Directors & Management	
Ian Hastings	Non Executive Chairman
Dianzhou He	Deputy Chairman
Jun Shang Liang (alternate Jie You)	Non Executive Director
Yuzi (Albert) Zhou	Executive Director
Rob Allen	Company Secretary
Philip Ash	Chief Executive Officer

Top 10 Shareholders	No.	%.
Xingang Resources (HK) Limited	98,026,518	54.16%
Rich Mark Development (Group) Pty Ltd	28,218,366	15.59%

Corporate

The company has deferred joint venture discussions with potential Chinese partners whilst it collects and analyses additional information concerning transport logistics. Potential Chinese joint venture partners remain supportive and the company is working towards a potential joint venture with Xinyang Iron & Steel which it hopes to conclude in the near future.

Magnetite Range Iron Project

The Company's wholly owned Magnetite Range project is located in the Midwest region of Western Australian, immediately adjacent to the Extension Hill iron ore mine, and contains total JORC resource of **434.5 Mt at 31.4% Fe** at 15% weight recovery cut off, as announced to the ASX on 28 November 2012.

Ongoing analysis of development and funding options is being undertaken in China. Approval pathways to convert existing exploration lease into a mining lease by March 2015 are being considered. Study of certain logistics aspects including product transport costs, power and water options and approvals pathways are being undertaken in Australia to assist Chinese study.

Joint Venture discussions with potential partners have been placed on hold whilst the company undertakes a separate detailed transport and logistics study which it hopes to use to conclude the joint venture discussions. Whilst the company and its potential joint venture partners have completed limited product testing and analysis in China greater analysis of transport options is required to complete production modelling which in turn should enable joint venture discussions be concluded.

It is hoped to conclude joint venture discussions in the near future.

Katanning Titanium Vanadium Project

Follow up over a low order gold anomaly on tenement E70/2729 commenced at period end.

Arcadia Gold Project - Meekatharra

Previous RC and diamond drillingat the Hope River Prospect has identified an auriferous quartz dolerite over a 2km length of the N-S trending Hope River shear zone. The most significant intersections include:

- 8m @ 4.24 g/t Au (MHD 46 on cross section 7023950mN)
- 8m @ 3.89 g/t Au (MHC 21 on cross section 7023235mN)
- 1m @ 15.5 g/t Au (MHC 13 on cross section 7024435mN)

www.accentresources.com.au

Aircore drill testing of a portion of the untested northern strike extension of the Hope River shear zone returned anomalous composite assay results (peak 8m @ 1.2 g/t Au) over more than 1km and require RC follow up.

No field work was completed at the Meekatharra project.

Norseman Gold Project

The Norseman project occurs within a strongly mineralised portion of the southern Norseman-Wiluna greenstone belt and is located 5km south of Norseman.

A JORC 2004 compliant resource for Iron Duke and Surprise deposits of **1,039,400 tonnes @ 1.8 g/t Au for 59,500 ounces** (99 percentile upper cut, 1.0 g/t Au lower cut off) was announced to the ASX on 26 November 2012. Over 70-80% of the resource is shallow, within 50m of surface. The review and resource estimation exercise has clearly demonstrated that additional drilling is required to test deeper potential and newly identified zones

No field work was completed at the Norseman project.

Yours faithfully,
Accent Resources NL

Ian Hastings
Non Executive Chairman
