Pateke-4H Appraisal Drilling Update

Pan Pacific Petroleum has been advised by AWE, the Operator of PMP38158, that as of 06:00hrs the Pateke-4H appraisal/development well sidetrack being drilled by the semi-submersible drilling rig the "Kan Tan IV" was at a measured depth of 4,083m BRT (below rotary table) and the 9 5/8 inch casing has been installed and cemented with the shoe at 3669m BRT.

The 8 1/2 inch drilling assembly is being run in hole and preparations are being made to drill out the shoe following which the well will be drilled horizontally through the F10 reservoir to a planned total measured depth of 5,361m BRT.

The Kapuni F10 sandstone objective has already been intersected on prognosis with oil shows and indications of the likely presence of an oil bearing reservoir in the original drill-hole and the sidetrack, which is very encouraging. However, the commercial significance of the oil shows will not be clear until the horizontal drilling has been completed and the accumulation volume and reservoir quality have been fully assessed.

Pateke-4H is targeting contingent resources contained in Pateke North a potential extension of the Pateke Field which is not being accessed by Pateke-3H, the current producing well on the Pateke structure. If successful the well will be completed for subsequent tie-back to the Tui FPSO for production with first oil expected before the end of Q1 2015.

The Joint Venture partners in PMP 38158 are:

Pan Pacific Petroleum NL (via subsidiaries)	15.0%
AWE Limited (via subsidiaries) (Operator)	57.5%
New Zealand Oil & Gas (via subsidiaries)	27.5%
