Caltex Refiner Margin Update (March 2015)

Caltex advises its realised lagged¹ Caltex Refiner Margin (CRM²), in respect of CRM sales from production for the month of March 2015.

	March 2015	February 2015	March 2014
Unlagged CRM	US\$20.03/bbl	US\$13.18/bbl	US\$9.03/bbl
Impact of 7 day lag positive/(negative)	US\$0.63/bbl	US(\$7.87)/bbl	US\$1.47/bbl
Realised CRM	US\$20.66/bbl	US\$5.31/bbl	US\$10.50/bbl
CRM Sales from current production	487ML	479ML	996ML

The March unlagged CRM was US\$20.03/bbl. This is above the prior month (February 2015: US\$13.18/bbl) and prior year equivalent (US\$9.03/bbl). Regionally, the unlagged Caltex Singapore Weighted Average Margin was US\$17.09/bbl, higher than both the prior month (February 2015: US\$13.62/bbl) and prior year (March 2014: US\$12.97/bbl).

Lower Brent prices partially offset by higher petrol and diesel refiner margins in the last week of March drove a favourable US\$0.63/bbl seven day timing lag (February unfavourable: US(\$7.87)/bbl). March 2015 realised CRM was US\$20.66/bbl, above February 2015 of US\$5.31/bbl, and the prior year comparative (March 2014: US\$10.50/bbl).

Sales from production in March 2015 (487ML) were below the prior year equivalent (March 2014: 996ML) when both Lytton and Kurnell refineries were operating.

For the three months from 1 January 2015 to 31 March 2015, the average realised CRM was US\$15.65/bbl (2014: US\$8.78/bbl) with CRM sales from production totalling 1,500ML (2014: 2,738ML).

Period end 31 March	YTD 2015	YTD 2014
Realised CRM	US\$15.65/bbl	US\$8.78/bbl
Unlagged CRM	US\$16.10/bbl	US\$8.01/bbl
CRM Sales from production	1,500ML	2,738ML

Notes

1. A fall in the Australian dollar crude price, particularly at the latter end of the month, produces a positive lag effect on the CRM (i.e. increases the CRM) and, conversely, in the event of a rise in the Australian dollar crude price, a negative lag effect occurs (i.e. reduces the CRM).
2. CRM represents the difference between the cost of importing a standard Caltex basket of products to eastern Australia and the cost of importing the crude oil required to make that product basket.

The CRM is calculated in the following manner:

Weighted Singapore product prices (for a standard Caltex basket of products)
Less: Reference crude price (the Caltex reference crude marker is Dated Brent)

Equals: Singapore Weighted Average Margin (Dated Brent basis)

Plus: Product quality premium
Crude discount
Product freight

Less: Crude premium
Crude freight
Yield Loss

Equals: Caltex Refiner Margin

The Caltex Refiner Margin is converted to an Australian dollar basis using the prevailing average monthly exchange rate.

CRM is just one contributor to the Replacement Cost Operating Profit (RCOP) EBIT earnings (excluding significant items). Other items contributing to the RCOP EBIT include Transport Fuels Marketing volume and margin, Lubricants and Specialties volume and margin, Non-Fuel Income and Other Margin less Operating Expenses.
