

30 April 2015

ASX/TSX ANNOUNCEMENT
Quarterly Report of Operations
For The Period Ended 31 March 2015

HIGHLIGHTS

Olaroz Lithium Facility

- Final circuits of the lithium carbonate plant commissioned by the end of January
- First commercial sales from Olaroz to European customer dispatched in April
- Samples now being dispatched to industrial and battery industry customers
- Strong market conditions for Lithium

Filling of Product for Commercial Sales and Sample Dispatches

Borax Argentina

- **Sales volume in line with March quarter last year**
- **Focus is firmly on growth**

Corporate

- **Completed a \$50M Private Placement and Share Purchase Plan**
- **Sydney Mining Club Presentation - Lithium Supply and Demand**

Olaroz Lithium Facility

[For more information on Olaroz please click here](#)

The Olaroz Lithium Facility is Orocobre's flagship project located in the Jujuy province of Argentina. Together with partners, Toyota Tsusho Corporation (**TTC**) and Jujuy Energia y Minería Sociedad del Estado (**JEMSE**), Orocobre is now operating the first large scale "green fields" lithium brine project in approximately 20 years. The Facility is ramping up commercial production to reach the nameplate monthly production of 1,450 tonnes per month (17,500tpa) expected to be reached during the fourth quarter of 2015. The Olaroz Lithium Facility joint venture is operated through Argentine subsidiary Sales de Jujuy SA (**SDJ SA**). The effective equity interests are: Orocobre 66.5%, TTC 25.0% and JEMSE 8.5%.

Commissioning and Production

On 2 February 2015 the Company announced the completion of the commissioning phase for the lithium carbonate plant at the Olaroz Lithium Facility. With the successful commissioning of the plant circuits the Facility was able to enter into the commercial production ramp-up stage.

During the production ramp-up stage the focus of activities was on the establishment of process control parameters and operating procedures to allow production of consistent quality product at the Olaroz Lithium Facility and the transition to commercial production. The first priority was the operation of the primary lithium carbonate circuit, in particular the removal of magnesium and calcium with the polishing filter and the development of operating controls on the primary lithium carbonate reactor. Over the past weeks these process control parameters and operating procedures have been successfully developed and the primary circuit is producing primary lithium carbonate product within the specification for feed to the purification circuit. Similarly, within the purification circuit process, process control parameters and operating procedures have been successfully developed on absorption, IX and crystalliser circuits and the purification circuit is producing high quality product suitable for both industrial and battery industry markets. The drying and compacting/micronising circuit is also working well.

During this early operational stage a number of improvements have been made to the circuit overcoming various bottlenecks. These include using steam injection directly into the lithium carbonate crystalisers in the purification circuit which has removed the lithium carbonate encrustation issue in the circuit that was previously affecting availability. In addition a number of other minor construction defects, which might be considered typical of any new plant, have been rectified.

With the establishment of process controls and operating procedures to produce high quality product and the removal of “bottle necks”, attention will move over the coming months to increasing circuit availability, plant efficiencies and throughput.

Dispatch of Samples

Commercial samples produced from the Olaroz Lithium Facility are being dispatched to customers as the final stage of product qualification. The time period for final sample approval, where required, varies from 1 week to 3-6 months depending on the specific customer requirements.

As some customers do not require a sample for final approval the first commercial sales order has also been dispatched to a European customer. TTC, as Commercial Sales Agent for the Olaroz Lithium Facility, has finalised a number of customer contracts for 2015 supply. There has been significant focus on ensuring optimal diversity is built into the customer base across markets and geography.

TTC has also received the first firm orders for supply to third parties of 5,000tpa of product, subject to final quality confirmation. It is currently anticipated that the orders for all of 2015 production from the Olaroz Lithium Facility will be received by 30 June 2015.

First Commercial Dispatch from the Olaroz Lithium Facility

Borax Argentina

Borax Argentina has extensive operations and a fifty year production history, producing borax chemicals, boric acid and boron minerals. The production currently comes from three principal mines at Tincalayu, Sijes and Porvenir with concentrators at the first two locations and a chemicals plant at Campo Quijano producing refined products.

Operations

Approximately 8,981 tonnes of combined products were sold during the quarter. This is in line with the March quarter the previous year. This is down on the previous two quarters due to the September and December quarters containing a substantial volume of ore sales, which was a management decision to offset slower than expected ramp-up of refined products following the relocation of the borax plant.

Combined Product Sales Volume by Quarter*

<u>2013/2014 Quarters</u>		<u>2014/2015 Quarters</u>	
<i>June 2013</i>	<i>9,562</i>	<i>June 2014</i>	<i>9,558</i>
<i>September 2013</i>	<i>10,103</i>	<i>September 2014</i>	<i>12,325</i>
<i>December 2013</i>	<i>11,410</i>	<i>December 2014</i>	<i>12,970</i>
<i>March 2014</i>	<i>9,027</i>	<i>March 2015</i>	<i>8,981</i>

**Combined product sales volumes include borax chemicals, boric acid and boron minerals and includes sales of tincal ore of 4,021 tonnes in September quarter and 4,225 tonnes in the December quarter*

Corporate and Administration

Cash Position

At the end of the quarter, the Company had a cash position of A\$66.4m with a proportion of this total committed to Stand by Letters of Credit as explained below.

As detailed in Note 1 in the attached Appendix 5B, there are Standby Letters of Credit (**SBLCs**) in place for SDJ SA. A SBLC allows Orocobre to provide working capital to SDJ SA by depositing funds in USD as security in a restricted term deposit. This allows a SBLC to be issued which in turn allows SDJ SA to draw down funds in Argentina to the equivalent ARS\$ (peso) value.

The SBLCs relating to SDJ SA total A\$40.616m. The need for SBLCs to provide working capital for SDJ SA has arisen principally due to delays in the production start-up.

Once SDJ SA becomes cash flow positive, the funds drawn down will begin to be repaid and the amount required to be held as security in the SBLC facility will also begin to reduce, resulting in cash flow in USD back to Orocobre. The Company expects this to commence in Q2 2016. Therefore, the funds are restricted but recoverable and also earn a nominal rate of interest while held as security in the term deposit.

\$50m Capital Raising

During the quarter the Company announced a \$50m capital raise comprising a \$40m placement to both domestic and international institutional and sophisticated investors and a \$10m underwritten Share Purchase Plan (**SPP**). Both the SPP and the Private Placement were completed at an issue price of \$2.55 per share the proceeds of the capital raise will be used primarily to fund working capital requirements for the Olaroz Lithium Facility during the production ramp-up stage.

The Company received strong support in both the placement and the SPP with the total A\$50,000,000 raised. Company Chairman, James Calaway and Managing Director and Chief Executive Officer, Richard Seville also participated in the capital raise subscribing for 267,563 and 100,000 shares respectively at the issue price of \$2.55 per share.

Sydney Mining Club Presentation

On 2 April 2015 Company management presented at the 198th Sydney Mining Club Lunch held at the Tattersalls Club in Sydney. The theme of Orocobre's presentation was "Right Place, Right Time" which focused on the supply and demand dynamic in the lithium market and the imminent supply side shortage.

About Orocobre Limited

Orocobre Limited is listed on the Australian Securities Exchange and Toronto Stock Exchange (ASX:ORE) (TSX:ORL), and is building a substantial Argentinian-based industrial minerals company through the construction and operation of its portfolio of lithium, potash and boron projects and facilities in the Puna region of northern Argentina. The Company has built, in partnership with Toyota Tsusho Corporation and JEMSE, the first large-scale, greenfield brine based lithium project in 20 years at the Salar de Olaroz with planned production of 17,500 tonnes per annum of low-cost battery grade lithium carbonate. The full monthly production rate is expected to be reached in the last quarter 2015.

The Olaroz Lithium Facility has a low environmental footprint because of the following aspects of the process:

- The process is designed to have a high processing recovery of lithium. With its low unit costs, the process will result in low cut-off grades, which will maximise resource recovery.
- The process route is designed with a zero liquid discharge design. All waste products are stored in permanent impoundments (the lined evaporation ponds). At the end of the project life the ponds will be capped and returned to a similar profile following soil placement and planting of original vegetation types.

- Brine is extracted from wells with minimum impact on freshwater resources outside the salar. Because the lithium is in sedimentary aquifers with relatively low permeability, drawdowns are limited to the salar itself. This is different from halite hosted deposits such as Salar de Atacama, Salar de Hombre Muerto and Salar de Rincon where the halite bodies have very high near surface permeability and the drawdown cones can impact on water resources around the Salar affecting the local environment.
- Energy used to concentrate the lithium in the brine is solar energy. The carbon footprint is lower than other processes.
- The technology developed has a very low maximum fresh water consumption of <20 l/s, which is low by industry standards.
- Sales de Jujuy S.A. is also committed to the ten principles of the sustainable development framework as developed by The International Council on Mining and Metals. The Company has an active and well-funded “Shared Value” program aimed at the long term development of the local people.

The Company continues to follow the community and shared value policy to successfully work with suppliers and the employment bureau to focus on the hiring of local people from the communities of Olaroz, Huancar, Puesto Sey, Pastos Chicos, Catua, Susques, Jama, El Toro, Coranzulí, San Juan and Abrapampa. The project implementation is through EPCM (Engineering, Procurement and Construction Management) with a high proportion of local involvement through construction and supply contracts and local employment. The community and shared value policy continues to be a key success factor, training local people under the supervision of high quality experienced professionals.

Technical Information, Competent Persons’ and Qualified Persons Statements

The Company is not in possession of any new information or data relating to historical estimates that materially impacts on the reliability of the estimates or the Company’s ability to verify the historical estimates as mineral resources, in accordance with the JORC Code. The supporting information provided in the initial market announcement on 21/08/12 continues to apply and has not materially changed.

Additional information relating to the Company’s projects is available on the Company’s website in “Technical Report – Salar de Olaroz Lithium-Potash Project, Argentina” dated May 30, 2011, (the Olaroz Report), the “Technical Report – Salinas Grandes Project” dated April 30, 2010 and the “Technical Report – Salar de Cauchari Project, Argentina” dated April 30, 2010, respectively, which have each been prepared

by John Houston, Consulting Hydrogeologist, together with, in the case of the Olaroz Report, Mike Gunn, Consulting Processing Engineer, in accordance with NI 43-101.

Caution Regarding Forward-Looking Information

This news release contains “forward-looking information” within the meaning of applicable securities legislation. Forward-looking information contained in this release may include, but is not limited to, the completion of commissioning, the commencement of commercial production and ramp up of the Olaroz Lithium Facility and the timing thereof, the expected brine cost and grade at the Olaroz Lithium Facility, the estimation and conversion of exploration targets to resources at the Olaroz Lithium Facility, the viability, recoverability and processing of such resources, the potential for an expansion at the Olaroz Lithium Facility, the capital cost of an expansion at the Olaroz Lithium Facility; the future performance of the relocated borax plant, including without limitation the plant’s estimated production rate, financial data, the estimates of mineral resources or mineralisation grade at Borax Argentina mines, the economic viability of such mineral resources or mineralisation, mine life and operating costs at Borax Argentina mines, the projected production rates associated with the borax plant, the market price of borax whether stated or implied, demand for borax and other information and trends relating to the borax market, taxes including recoveries of IVA, royalty and duty rate and the ongoing working relationship between Orocobre and the province of Jujuy.

Such forward-looking information is subject to known and unknown risks, uncertainties and other factors that may cause actual results to be materially different from those expressed or implied by such forward-looking information, including but not limited to the risk of further changes in government regulations, policies or legislation; the possibility that required concessions may not be obtained, or may be obtained only on terms and conditions that are materially worse than anticipated; that further funding may be required, but unavailable, for the ongoing development of the Company’s projects; fluctuations or decreases in commodity prices and market demand for product; uncertainty in the estimation, economic viability, recoverability and processing of mineral resources; risks associated with weather patterns and impact on production rate; risks associated with commissioning and ramp up of the Olaroz Lithium Facility to full capacity; unexpected capital or operating cost increases; uncertainty of meeting anticipated program milestones at the Olaroz Lithium Facility; general risks associated with the further development of the Olaroz Lithium Facility; general risks associated with the operation of the borax plant; a decrease in the price for borax resulting from, among other things, decreased demand for borax or an increased supply of borax or substitutes, as well as those factors disclosed in the Company’s Annual Report for the year ended June 30, 2014 filed at www.sedar.com.

The Company believes that the assumptions and expectations reflected in such forward-looking information are reasonable. Assumptions have been made regarding, among other things: the timely receipt of required approvals and completion of agreements on reasonable terms and conditions; the ability of the Company to obtain financing as and when required and on reasonable terms and conditions; the prices of lithium, potash and borates; market demand for products and the ability of the Company to operate in a safe, efficient and effective manner. Readers are cautioned that the foregoing list is not exhaustive of all factors and assumptions which may have been used. There can be no assurance that forward-looking information

will prove to be accurate, as actual results and future events could differ materially from those anticipated in such information. Accordingly, readers should not place undue reliance on forward-looking information. The Company does not undertake to update any forward-looking information, except in accordance with applicable securities laws.

4.2	Payment to other Entities	-
4.3	Production	5,800
4.4	Administration	2,800
4.5	Capex	100
	Total	8,840

Reconciliation of cash

Reconciliation of cash at the end of the quarter (as shown in the consolidated statement of cash flows) to the related items in the accounts is as follows.

		Current quarter \$A'000	Previous quarter \$A'000
5.1	Cash on hand and at bank – Note 1	56,880	23,534
5.2	Deposits at call	10,002	
5.3	Bank overdraft – Note 2	(460)	(4,433)
5.4	Other		
	Total: cash at end of quarter (item 1.22)	66,422	19,101

Note 1:- Included in the A\$56,880 are deposits of A\$40,616 related to the Company issuing Standby Letters of Credit (SBLC's) on behalf of the joint venture company SDJ SA. Such SBLCs have been provided due to a working capital requirement for SDJ SA which has arisen principally due to delays in the production start up. SBLC's allow Orocobre to provide working capital to SDJ SA by depositing funds in US\$ as security in a restricted term deposit. This allows a SBLC to be issued which in turn allows SDJ SA to draw down funds in Argentina from a bank, to the equivalent AR\$ (peso) value. The SBLC issued in Australia in effect guarantees the line of credit or bank overdraft provided in Argentina. Net funds available after SBLC's are A\$25,806.

Note 2:- The bank overdraft is related to the Company's subsidiary Borax Argentina SA.

Changes in interests in mining tenements

	Tenement reference	Nature of interest	Interest at beginning of quarter	Interest at end of quarter
6.1	Interests in mining tenements relinquished, reduced or lapsed	Nil		
6.2	Interests in mining tenements acquired or increased	Nil		

Issued and quoted securities at end of current quarter

Description includes rate of interest and any redemption or conversion rights together with prices and dates.

	Total number	Number quoted	Issue price per security (see note 3) (cents)	Amount paid up per security (see note 3) (cents)

Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 1022: Accounting for Extractive Industries* and *AASB 1026: Statement of Cash Flows* apply to this report.
- 5 **Accounting Standards** ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
