Review of the financial year 2015

The financial year 2014/15 finished with total sales of 51,355 MAS units, 18.2% higher than in the previous year. The year finished on a positive note with growth of 21.2% in Q4, after an unexpected drop in sales in Q3, due to inclement weather in the North East of the USA and Canada.

New sales records were reached during the year in all three geographic regions. US direct sales grew by 23.7% during the past financial year, reflecting the impact of new products which were launched during the year and the positive impact of our various medical initiatives. European sales grew by 17.3%, with 6 new markets (Finland, UK, Ireland, Spain, Portugal and Italy) entered during the year. Some of these new markets needed more time than expected to achieve regulatory approvals, hire competent staff and therefore commence operations. During the second half of 2014/15 launch operations were completed in all the new European markets and expectations are that those markets will follow the positive trends seen in the "emerging markets" of Norway and Belgium, which were opened about two years ago. Sales volume grew in the APAC region by 13.6%. The majority of APAC sales are concentrated in Australia, where growth was 9.6% for the year, reflecting some limitations due to the lack of reimbursement for COAT[™]. Other countries in the APAC region include Japan, where sales grew by 30.7%, South Korea with sales growth of 34% was achieved and South East Asia, where sales increased by 35.1% during the year.

The expansion of our product line, combined with the geographic expansion which took place over the last two years, has proven to be successful. Sales trends in all regions are positive and augur well for the financial year 2016.

Insurance contracts recently entered into by SomnoMed in the US, Holland and Germany indicate a positive shift in the reimbursement landscape and an emerging managed care business, which should allow the company to generate margins and net income from non-device revenues in the future. SomnoMed has historically recognized such revenue on a net basis only and not on the full proceeds received from the insurer. As a result of its medical initiative, insurers are requesting SomnoMed to provide the services for a full treatment process of a patient, whereby medical insurers fully outsource this treatment to SomnoMed. In such cases SomnoMed receives revenue for supplying the treatment package consisting of a COAT device, dental service fee for initial consultation, fitting the SomnoDent® device, a follow up dental visit and full patient management and at the same time incurs additional expenditure in generating that revenue.

The Directors believe a more appropriate treatment of revenues, given the changing nature of the business and reviewing the relevant contracts, is to record the gross amount received from the insurance company as sales revenue and to reflect this under managed care revenues, with the associated costs of providing these services treated as cost of goods sold. During the year total non-device revenues exceeded \$5 million. Revenues of \$34.44 million were generated for 2014/15, against restated revenues of \$30.27 million in the previous year, representing a growth year on year of 14%. MAS revenues were 84% of the total revenues in 2014/15 (2013/14 - 83.0%). The directors believe this treatment will result in providing more relevant and reliable financial reporting, given the changing nature of the company's business. Prior period revenues and cost of goods sold have been adjusted and restated to be consistent with the current year's revenue recognition treatment based on the terms of the contracts with insurers.

SomnoMed generated an unaudited EBITDA of \$870,000 (as adjusted) in 2014/15, 17.1% below the \$1.05 million generated in the previous year. Factors influencing the result were a 2,000 to 3,000 unit gap in Q3, following the closure of dental practices during several winter storms and generally adverse conditions in January and February in the US and Canada. The loss of margin attributable to this was in the order of \$850,000 to \$1.25 million. Also impacting on the result were significant increases in regional sales & marketing and finance & administration expenses. These

were linked to the expansion into new markets, the strengthening of our sales forces and marketing departments and costs relating to the launch of several new products during the year. Over the last two years executives and staff employed in marketing & sales departments in our regions grew from just 17 people to 48. This expansion is now complete with future growth in volume and revenues expected to grow at a significantly greater rate than the sales & marketing and other administration and corporate expenses.

The average net sales price of our SomnoDent® devices was \$607, which was \$32 lower than in the previous year, reflecting the quick uptake of our new mid-price products in the US. Gross margin generated on the sale of SomnoDent® devices during the financial year increased from 67% to 68%, underlining an ability to achieve a similar gross margin on mid-price products achieved on the Signature-line of products. Expected volume increases in the financial year 2016 and beyond should allow the Company to maintain or improve on the gross margin achieved in 2014/15.

The geographic split of our business unit sales has not changed significantly year on year. North America's share grew by 1% to 54% of total sales, Europe remained at 36% and APAC reduced slightly to 10%.

There were many achievements during the last financial year. Standing out are the FDA approvals granted for our new DentiTrac® compliance control system and for the new SomnoDent® Herbst Advance®, SomnoDent® Air and Air+® and SomnoDent Fusion® devices in June 2015. Our website was completely reworked and launched, internet based education seminars were introduced and the expansion of our factory to a capacity of 100,000 units was completed. We entered six new countries, increased our share in our French company from 65% to 93% through the capitalization of loans and in June 2015 the restructuring of the loss-generating French operation was completed.

During the year SomnoMed also entered into additional contracts with insurers in the US, Holland and Germany. These contracts are different to those previously entered into, as they give SomnoMed control and responsibility for the treatment package, including the dental service fee and an income for the management of patients. This, we believe, is an expression of the increasing desire of insurers to use COAT™ but at the same time seek a fixed price commitment, covering the total treatment, instead of dealing with a growing number of dentists charging a wide range of prices for the provision of an MAS device. In July 2015 SomnoMed acquired the remaining of 50% of SMH Biomaterial AG, the owner of our proprietary B-Flex lining material.

Pre-tax profits grew by 84.9% in the financial year 2014 to \$747,000 and profits after tax increased by 47.1% to \$597,000. SomnoMed finished the year with a cash balance of \$8.3 million and is confident of having sufficient cash reserves to continue with its on-going expansion in the upcoming year.

The Board is confident the company will continue its strong growth in the years ahead and is pleased to provide guidance for the 2015/16 financial year as outlined below:

Volume \rightarrow 62,000 MAS units (+20%)

Revenues \rightarrow \$42.0 million (+22%)

MAS GM \rightarrow 69% (+1%)

EBITDA \rightarrow \$3 million (+345%)

The cash balances at 30 June 2014 and 30 June 2015 are represented by cash at bank and money market securities.

^{*} Refer Note 15

1. REPORTING ENTITY

SomnoMed Limited is a company domiciled in Australia. The consolidated financial statements of the Company as at and for the year ended 30 June 2015 comprise the Company and its controlled entities (together referred to as the Consolidated Entity). The Consolidated Entity produces and sells devices for the oral treatment of sleep related disorders.

2. BASIS OF PREPARATION

Statement of compliance

The preliminary financial report has been prepared in accordance with Australian Accounting Standards and Interpretations as issued by the Australian Standards Board and the Corporations Act 2001 as appropriate for profit oriented entities. The preliminary financial report does not include all the notes of the type normally included in an annual financial report. Accordingly, this report is to be read in conjunction with the annual report for the year ended 30 June 2014 and any public pronouncements made by the consolidated entity during the year in accordance with the continuous disclosure requirements of the Corporations Act 2001. Unless otherwise detailed in this note, accounting policies have been consistency applied by the entities in the group, and are consistent with those applied in the 30 June 2014 annual report.

b. Basis of measurement

The consolidated financial statements have been prepared on the historical cost basis, except for derivative financial instruments, which are measured at fair value.

c. Functional and presentation currency

These consolidated financial statements are presented in Australian dollars, which is the Company's functional currency.

d. Use of judgments and estimates

The preparation of financial statements requires management to make judgements, estimates and assumptions that affect the application of accounting policies and reported amounts of assets, liabilities, income and expenses. Actual results may differ from these estimates. Estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised and in any future periods affected.

3. SIGNIFICANT ACCOUNTING POLICIES

The accounting policies set out below have been applied consistently to all periods presented in these consolidated financial statements and have been applied consistently by all entities in the Consolidated Entity.

a. Basis of Consolidation

Controlled entities

Controlled entities are entities controlled by the Company. Control exists when the Company has power, directly or indirectly, to govern the financial and operating policies of an entity so as to obtain benefits from its activities. In assessing control, potential voting rights that presently are exercisable or convertible are taken into account. The financial statements of controlled entities are included in the consolidated financial statements from the date that control commences until the date that control ceases. Investments in controlled entities are carried at their cost of acquisition in the Company's financial statements.

Transactions eliminated on consolidation

Intra-group balances and any unrealised gains and losses or income and expenses arising from intragroup transactions, are eliminated in preparing the consolidated financial statements.

Business combinations

Business combinations occur where an acquirer obtains control over one or more businesses.

A business combination is accounted for by applying the acquisition method, unless it is a combination involving entities or businesses under common control. The business combination will be accounted for from the date that control is attained, whereby the fair value of the identifiable assets acquired and liabilities (including contingent liabilities) assumed is recognised (subject to certain limited exemptions).

3. SIGNIFICANT ACCOUNTING POLICIES (continued)

a. Basis of Consolidation (continued)

Business combinations

When measuring the consideration transferred in the business combination, any asset or liability resulting from a contingent consideration arrangement is also included. Subsequent to initial recognition, contingent consideration classified as equity is not re-measured and its subsequent settlement is accounted for within equity. Contingent consideration classified as an asset or liability is re-measured in each reporting period to fair value, recognising any change to fair value in profit or loss, unless the change in value can be identified as existing at acquisition date.

All transaction costs incurred in relation to business combinations are recognised as expenses in profit or loss when incurred.

The acquisition of a business may result in the recognition of goodwill or a gain from a bargain purchase.

Goodwill

All business combinations are accounted for by applying the acquisition method. Goodwill represents the difference between the cost of the acquisition and the fair value of the net identifiable assets acquired.

Goodwill is stated at cost less any accumulated impairment losses. Goodwill is allocated to cash generating units and is tested annually for impairment. Negative goodwill arising on an acquisition is recognised directly in the statement of profit or loss and other comprehensive income.

b. Income Recognition

Revenues are recognised at fair value of the consideration received net of the amount of goods and services tax (GST).

Sales revenue

Sales revenue comprises revenue earned (net of returns, discounts and allowances) from the provision of products and services. Revenue from the sale of goods is recognised upon dispatch of goods to customers.

Other income

Other income is recognised on a systematic basis over the periods necessary to match it with the related costs for which it is intended to compensate or, if the costs have already been incurred, in the period in which it becomes receivable. The income is deemed to be receivable when the entitlement is confirmed. Dividend income from subsidiaries is recognised by the parent when the dividends are declared by the subsidiary.

c. Goods and Services Tax

Revenues, expenses and assets are recognised net of the amount of GST, except where the amount of GST incurred is not recoverable from the taxation authority. In these circumstances, the GST is recognised as part of the cost of acquisition of the asset or as part of the expense. Receivables and payables are stated with the amount of GST included. The net amount of GST recoverable from, or payable to, the relevant taxation authority is included as a current asset or liability in the balance sheet. Cash flows are included in the statement of cash flows on a gross basis. The GST components of cash flows arising from investing and financing activities, which are recoverable from, or payable to, the relevant taxation authority are classified as operating cash flows.

d. Foreign Currency

Foreign currency transactions

Transactions in foreign currencies are translated to the respective functional currencies of controlled entities at the foreign exchange rate ruling at the date of the transaction. Monetary assets and liabilities denominated in foreign currencies at the reporting date are translated to the functional currency at the foreign exchange rate ruling at that date. Non-monetary transactions denominated in foreign currencies that are stated at historical cost are translated using the exchange rate at the date of the transaction. Non-monetary assets and liabilities denominated in foreign currencies that are stated at fair value are translated to the functional currency at the foreign exchange rates ruling at the date the fair value was determined. Foreign exchange differences arising on translation are recognised in the statement of profit or loss and other comprehensive income.

3. SIGNIFICANT ACCOUNTING POLICIES (continued)

d. Foreign Currency (continued)

Financial statements of foreign operations

The assets and liabilities of foreign operations, including goodwill and fair value adjustments arising on acquisition, generally are translated to the functional currency at foreign exchange rates ruling at the reporting date. The revenues and expenses of foreign operations are translated to the functional currency at rates approximating the foreign exchange rates ruling at the dates of transactions. Foreign currency differences arising from translation of controlled entities with a different functional currency to that of the Consolidated Entity are recognised in the foreign currency translation reserve (FCTR). When a foreign operation is disposed of, in part or in full, the relevant amount of its FCTR is transferred to profit or loss.

Foreign exchange gains and losses arising from a monetary item receivable from or payable to a foreign operation, the settlement of which is neither planned nor likely in the foreseeable future, are considered to form part of a net investment in a foreign operation and are recognised directly in equity in the FCTR.

e. Cash and cash equivalents

Cash and cash equivalents comprise cash balances and call deposits with an original maturity of three months or less.

f. Financial Instruments

Derivative financial instruments

The Consolidated Entity does not currently hold, but held in the previous year, derivative financial instruments to hedge its exposure to foreign exchange risk arising from operating, investing and financing activities. In accordance with its treasury policy, the Consolidated Entity does not hold or issue derivative financial instruments for trading purposes. However, derivatives are not hedge accounted and are accounted for as trading instruments.

Derivative financial instruments are recognised initially at fair value. Attributable transaction costs are recognised in the income statement when incurred. Subsequent to initial recognition, derivative financial instruments are measured at fair value with changes in fair value accounted for in the statement of profit or loss and other comprehensive income.

Non-derivative financial assets and liabilities

Non-derivative financial instruments comprise investments in equity, trade and other receivables, cash and cash equivalents, loans, and trade and other payables.

Non-derivative financial instruments are recognised initially at fair value plus, for instruments not at fair value through the income statement, any attributable transaction costs. Subsequent to initial recognition, non-derivative financial instruments are measured as described below.

Accounting for finance income is discussed in accounting policy (o).

Determination of fair values

The fair value of forward exchange contracts is based upon the listed market price, if available. If a listed market price is not available, the fair value is estimated by discounting the difference between the contractual forward price and the current forward price for the residual maturity of the contract using a risk free interest rate based upon government bonds.

Other

Other non-derivative financial instruments are measured at amortised cost using the effective interest rate method, less any impairment losses.

g. Provisions

A provision is recognised in the balance sheet when the Consolidated Entity has a present legal or constructive obligation as a result of a past event that can be measured reliably, and it is probable that an outflow of economic benefits will be required to settle the obligation.

3. SIGNIFICANT ACCOUNTING POLICIES (continued)

g. Provisions (continued)

Warranties

Provisions for warranty claims are made for claims in relation to sales made prior to the reporting date, based on historical claim rate, respective product populations and average costs of returns and repairs. Warranty periods on MAS devices are dependent on individual market and regulatory conditions in different countries.

Make good lease costs

The Consolidated Entity has an operating lease over its premises that require the premises to be returned to the lessor in its original condition. The operating lease payments do not include an element for the repairs/overhauls. A provision for make good lease costs is recognised at the time it is determined that it is probable that such costs will be incurred in a future period, measured at the expected cost of returning the asset to the lessor in its original condition. An offsetting asset of the same value is also recognised and is classified in property, plant and equipment. This asset is amortised to the income statement over the life of the lease.

Research and development expenditure

Research and development expenditure during the research phase of a project is recognised as an expense when incurred. Development costs are capitalised only when technical feasibility studies identify that the project is expected to deliver future economic benefits and these benefits can be measured reliably. Development costs have a finite life and are amortised on a systematic basis based on the future economic benefits over the useful life of the project.

Other intangible assets

Intellectual property, acquired is stated at cost less accumulated amortisation (see below) and impairment losses (see accounting policy (h)).

Subsequent expenditure

Subsequent expenditure on capitalised intangible assets is capitalised only when it increases the future economic benefits embodied in the specific asset to which it relates. All other expenditure is expensed as incurred.

Amortisation

Amortisation is recognised in the income statement on a straight-line basis over the estimated useful lives of the intangible assets from the date they are available for use unless such lives are indefinite. Intangible assets with an indefinite useful life are systematically tested for impairment annually. The estimated useful lives for the current and comparative periods are as follows:

Patents 10 years Product development expenditure capitalized 5 years

h. Impairment

The carrying amounts of the Consolidated Entity's assets, other than inventories (see accounting policy (j)) are reviewed at each reporting date to determine whether there is any indication of impairment. If any such indication exists, the asset's recoverable amount is estimated (see below). An impairment loss is recognised whenever the carrying amount of an asset or its cash generating unit exceeds its recoverable amount. Impairment losses are recognised in the income statement of profit or loss unless the asset has previously been revalued, in which case the impairment loss is recognised as a reversal to the extent of that previous revaluation with any excess recognised through the statement of profit or loss. Impairment losses recognised in respect of cash generating units are allocated first to reduce the carrying amount of any goodwill allocated to the cash generating unit or a group of units and then, to reduce the carrying amount of the other assets in the unit or a group of units on a pro-rata basis.

3. SIGNIFICANT ACCOUNTING POLICIES (continued)

h. Impairment (continued)

Calculation of recoverable amount

Receivables

The recoverable amount of the Consolidated Entity's investments in receivables carried at amortised cost is calculated as the present value of estimated future cash flows, discounted at the original effective interest rate (i.e. the effective interest rate computed at initial recognition of these financial assets). Receivables with a short duration are not discounted. Impairment of receivables is not recognised until objective evidence is available that a loss event has occurred. Significant receivables are individually assessed for impairment. Impairment testing of significant receivables that are not assessed as impaired individually is performed by placing them into portfolios of significant receivables with similar risk profiles and undertaking a collective assessment of impairment. Non-significant receivables are not individually assessed. Instead, impairment testing is performed by placing non-significant receivables in portfolios of similar risk profiles, based on objective evidence from historical experience adjusted for any effects of conditions existing at each balance date. The allowance for impairment is calculated with reference to the profile of debtors in the Consolidated Entity's sales and marketing regions.

Other assets

The recoverable amount of other assets is the greater of their fair value less costs to sell, and value in use. In assessing value in use, the estimated future cash flows are discounted to their present value using a discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. For the purpose of impairment testing, assets are grouped together into the smallest group of assets that generate cash flows from continuing use that are largely independent of the cash flows of other assets or groups of assets (cash generating units). The goodwill acquired in a business combination, for the purpose of impairment testing is allocated to the cash generating units that are expected to benefit from the synergies of the combination. For an asset that does not generate largely independent cash inflows, the recoverable amount is determined for the cash generating unit to which the asset belongs.

Reversals of Impairment

An impairment loss in respect of a receivable carried at amortised cost is reversed if the subsequent increase in recoverable amount can be related objectively to an event occurring after the impairment loss was recognised. An impairment loss in respect of goodwill is not reversed. In respect of other assets, an impairment loss is reversed when there is an indication that the impairment loss may no longer exist and there has been a change in the estimates used to determine the recoverable amount. An impairment loss is reversed only to the extent that the asset's carrying amount does not exceed the carrying amount that would have been determined, net of depreciation or amortisation, if no impairment loss had been recognised.

i. Property, Plant and Equipment

Owned assets

Items of property, plant and equipment are stated at cost less accumulated depreciation (see below) and impairment losses (see accounting policy (h)). An asset's cost is determined as the consideration provided plus incidental costs directly attributable to the acquisition. Subsequent costs in relation to replacing a part of property, plant and equipment are recognised in the carrying amount of the item if it is probable that future economic benefits embodied within the part will flow to the Consolidated Entity and its cost can be measured reliably. All other costs are recognised in the statement of profit or loss as incurred.

Leased assets - Operating leases

Payments made under operating leases are expensed on a straight-line basis over the term of the lease, except where an alternative basis is more representative of the pattern of benefits to be derived from the leased property. Minimum lease payments include fixed rate increases.

3. SIGNIFICANT ACCOUNTING POLICIES (continued)

i. Property, Plant and Equipment (continued)

Depreciation

Depreciation is recognised in the statement of profit or loss on a straight-line basis. Items of property, plant and equipment, including leasehold assets, are depreciated using the straight-line method over their estimated useful lives, taking into account estimated residual values. Assets are depreciated from the date of acquisition or, in respect of internally constructed assets, from the time an asset is completed and held ready for use. Depreciation rates and methods, useful lives and residual values are reviewed at each balance sheet date. When changes are made, adjustments are reflected prospectively in current and future financial periods only.

The estimated useful lives in the current and comparative periods are as follows:

Leasehold improvements 1-3 years Plant & equipment 3-20 years

j. Inventories

Inventories are measured at the lower of cost and net realisable value. Net realisable value is the estimated selling price in the ordinary course of business less estimated costs of completion and selling, marketing and distribution expenses. Cost is based on the first-in-first-out principle and includes expenditure incurred in acquiring the inventories and bringing them to their existing condition and location.

k. Employee Benefits

Wages, salaries and annual leave

Liabilities for employee benefits for wages, salaries and annual leave expected to settle within 12 months of the year end represent present obligations resulting from employees' services provided up to reporting date, calculated at undiscounted amounts based on remuneration wage and salary rates that the Consolidated Entity expects to pay as at reporting date including related on-costs, such as workers' compensation insurance and payroll tax.

Other long-term employee benefits

The liability for annual leave and long service leave not expected to be settled within 12 months of the reporting date are recognised in non-current liabilities, provided there is an unconditional right to defer settlement of the liability. The liability is measured as the present value of expected future payments to be made in respect of services provided by employees up to the reporting date using the projected unit credit method. Consideration is given to expected future wage and salary levels, experience of employee departures and periods of service. Expected future payments are discounted using market yields at the reporting date on national government bonds with terms to maturity and currency that match, as closely as possible, the estimated future cash outflows.

Share based payments

The Company has granted options to certain directors and employees. The fair value of options and shares granted is recognised as a share and option expense with a corresponding increase in equity. The fair value is measured at the date the options or shares are granted taking into account market based criteria and expensed over the vesting period after which the employees become unconditionally entitled to the options and shares. The fair value of the options granted is measured using the Black-Scholes method, taking into account the terms and conditions attached to the options. The fair value of the performance shares granted is measured using the weighted average share price of ordinary shares in the Company, taking into account the terms and conditions attached to the shares. The amount recognised as an expense is adjusted to reflect the actual number of options and shares that vest except where forfeiture is due to market related conditions.

I. Receivables

Trade and other receivables are stated at amortised cost less impairment losses (see accounting policy (h)).

3. SIGNIFICANT ACCOUNTING POLICIES (continued)

m. Taxation

Income tax expense in the statement of profit or loss for the periods presented comprises current and deferred tax. Income tax is recognised in the statement of profit or loss except to the extent that it relates to items recognised directly in equity, in which case it is recognised in equity. Current tax is the expected tax payable on the taxable income for the year, using tax rates enacted or substantially enacted at reporting date, and any adjustment to tax payable in respect of previous years. Deferred tax is calculated using the balance sheet method, providing for temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes. Temporary differences are not provided for the initial recognition of goodwill and other assets or liabilities in a transaction that affects neither accounting nor taxable profit or differences relating to investments in subsidiaries to the extent that it is probable that they will not reverse in the foreseeable future.

Deferred tax is measured at the tax rates that are expected to be applied to the temporary differences when they reverse, based upon the laws that have been enacted at reporting date. A deferred tax asset is recognised only to the extent that it is probable that future taxable profits will be available against which the asset can be utilised. Deferred tax assets are reviewed at each reporting date and reduced to the extent that it is no longer probable that the related tax benefit will be realised. Additional income taxes that arise from the distribution of dividends are recognised at the same time as the liability to pay the related dividend is recognised.

Deferred tax assets and liabilities are offset if there is a legally enforceable right to offset current tax liabilities and assets, and they relate to income taxes levied by the same tax authority on the same taxable entity or on a different tax entity but they intend to settle current tax liabilities and assets on a net basis or their tax assets and liabilities will be realised simultaneously.

n. Payables

Trade and other payables are stated at amortised cost.

o. Finance income and expense

Interest income is recognised as it accrues in the statement of profit or loss using the effective interest method.

p. Earnings per share

The Consolidated Entity presents basic and diluted earnings per share (EPS) for its ordinary shares. Basic EPS is calculated by dividing the net profit or loss attributable to equity holders of the parent for the financial period, after excluding any costs of servicing equity (other than ordinary shares) by the weighted average number of ordinary shares of the Company, adjusted for any bonus issue.

Diluted EPS is calculated using the basic EPS earnings as the numerator. The weighted average number of shares used as the denominator is adjusted by the after-tax effect of financing costs associated with the dilutive potential ordinary shares and the effect on revenues and expenses of conversion to ordinary shares associated with dilutive potential ordinary shares adjusted for any bonus issue.

q. Segment Reporting - Determination and presentation of operating segments

An operating segment is a component of the Consolidated Entity that engages in business activities from which it may earn revenues and incur expenses, including revenues and expenses that relate to transactions with any of the Consolidated Entity's other components if separately reported and monitored. An operating segment's operating results are reviewed regularly by the Board of Directors to make decisions about resources to be allocated to the segment and assess its performance, and for which discrete financial information is available.

Segment results that are reported to the Board of Directors include items directly attributable to a segment as well as those that can be allocated on a reasonable basis. Unallocated items comprise mainly corporate head office results

r. Accounting judgment and estimates

Management discussed with the Audit Committee the development, selection and disclosure of the Consolidated Entity's critical accounting policies and estimates and the application of these policies and estimates.

3. SIGNIFICANT ACCOUNTING POLICIES (continued)

r. Accounting judgment and estimates (continued)

Key sources of estimation uncertainty

In particular, information about significant areas of estimation, uncertainty and critical judgments in applying accounting policies that have the most significant effect on the amounts recognised in the financial statements is described in the following areas:

Share-based payment transactions

The consolidated entity measures the cost of equity-settled transactions with employees by reference to the fair value of the equity instruments at the date at which they are granted. The fair value is determined by using either the Binomial or Black-Scholes model taking into account the terms and conditions upon which the instruments were granted. The accounting estimates and assumptions relating to equity-settled share-based payments would have no impact on the carrying amounts of assets and liabilities within the next annual reporting period but may impact profit or loss and equity.

Goodwill and other indefinite life intangible assets

The consolidated entity tests annually, or more frequently if events or changes in circumstances indicate impairment, whether goodwill and other indefinite life intangible assets have suffered any impairment, in accordance with the accounting policy stated in note 3. The recoverable amounts of cash-generating units have been determined based on value-in-use calculations. These calculations require the use of assumptions, including estimated discount rates based on the current cost of capital and growth rates of the estimated future cash flows.

Income tax

The consolidated entity is subject to income taxes in the jurisdictions in which it operates. Significant judgement is required in determining the provision for income tax. There are many transactions and calculations undertaken during the ordinary course of business for which the ultimate tax determination is uncertain. The consolidated entity recognises liabilities for anticipated tax audit issues based on the consolidated entity's current understanding of the tax law. Where the final tax outcome of these matters is different from the carrying amounts, such differences will impact the current and deferred tax provisions in the period in which such determination is made.

Impairment of non-financial assets other than goodwill and other indefinite life intangible assets

The consolidated entity assesses impairment of non-financial assets other than goodwill and other indefinite life intangible assets at each reporting date by evaluating conditions specific to the consolidated entity and to the particular asset that may lead to impairment. If an impairment trigger exists, the recoverable amount of the asset is determined. This involves fair value less costs of disposal or value-in-use calculations, which incorporate a number of key estimates and assumptions.

Recovery of deferred tax assets

Deferred tax assets are recognised for deductible temporary differences only if the consolidated entity considers it is probable that future taxable amounts will be available to utilise those temporary differences and losses.

Employee benefits provision

As discussed, the liability for employee benefits expected to be settled more than 12 months from the reporting date are recognised and measured at the present value of the estimated future cash flows to be made in respect of all employees at the reporting date. In determining the present value of the liability, estimates of attrition rates and pay increases through promotion and inflation have been taken into account.

3. SIGNIFICANT ACCOUNTING POLICIES (continued)

r. Accounting judgment and estimates (continued)

Lease make good provision

A provision has been made for the present value of anticipated costs for future restoration of leased premises. The provision includes future cost estimates associated with closure of the premises. The calculation of this provision requires assumptions such as application of closure dates and cost estimates. The provision recognised for each site is periodically reviewed and updated based on the facts and circumstances available at the time. Changes to the estimated future costs for sites are recognised in the statement of financial position by adjusting the asset and the provision. Reductions in the provision that exceed the carrying amount of the asset will be recognised in profit or loss.

Warranty provision

In determining the level of provision required for warranties the consolidated entity has made judgements in respect of the expected performance of the products, the number of customers who will actually claim under the warranty and how often, and the costs of fulfilling the conditions of the warranty. The provision is based on estimates made from historical warranty data associated with similar products and services.

Business combinations

Business combinations are initially accounted for on a provisional basis.

The fair value of assets acquired, liabilities and contingent liabilities assumed are initially estimated by the consolidated entity taking into consideration all available information at the reporting date. Fair value adjustments on the finalisation of the business combination accounting is retrospective, where applicable, to the period the combination occurred and may have an impact on the assets and liabilities, depreciation and amortisation reported.

s. Share Capital

Ordinary shares

Ordinary shares are classified as equity. Incremental costs directly attributable to the issue of ordinary shares and share options are recognized as a deduction from equity, net of any income tax benefit.

t. New Accounting Standards and Interpretations not yet mandatory or early adopted

Australian Accounting Standards and Interpretations that have recently been issued or amended but are not yet mandatory, have not been early adopted by the consolidated entity for the annual reporting period ended 30 June 2015. The consolidated entity's assessment of the impact of these new or amended Accounting Standards and Interpretations, most relevant to the consolidated entity, are set out below.

AASB 9 Financial Instruments

This standard is applicable to annual reporting periods beginning on or after 1 January 2018. The standard replaces all previous versions of AASB 9 and completes the project to replace IAS 39 'Financial Instruments: Recognition and Measurement'. AASB 9 introduces new classification and measurement models for financial assets. A financial asset shall be measured at amortised cost, if it is held within a business model whose objective is to hold assets in order to collect contractual cash flows, which arise on specified dates and solely principal and interest. All other financial instrument assets are to be classified and measured at fair value through profit or loss unless the entity makes an irrevocable election on initial recognition to present gains and losses on equity instruments (that are not held-fortrading) in other comprehensive income ('OCI'). For financial liabilities, the standard requires the portion of the change in fair value that relates to the entity's own credit risk to be presented in OCI (unless it would create an accounting mismatch). New simpler hedge accounting requirements are intended to more closely align the accounting treatment with the risk management activities of the entity. New impairment requirements will use an 'expected credit loss' ('ECL') model to recognise an allowance. Impairment will be measured under a 12-month ECL method unless the credit risk on a financial instrument has increased significantly since initial recognition in which case the lifetime ECL method is adopted. The standard introduces additional new disclosures. The consolidated entity will adopt this standard from 1 July 2018 but the impact of its adoption is yet to be assessed by the consolidated entity.

3. SIGNIFICANT ACCOUNTING POLICIES (continued)

t. New Accounting Standards and Interpretations not yet mandatory or early adopted (continued)

AASB 15 Revenue from Contracts with Customers

This standard is applicable to annual reporting periods beginning on or after 1 January 2017. The standard provides a single standard for revenue recognition. The core principle of the standard is that an entity will recognise revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services. The standard will require: contracts (either written, verbal or implied) to be identified, together with the separate performance obligations within the contract; determine the transaction price, adjusted for the time value of money excluding credit risk; allocation of the transaction price to the separate performance obligations on a basis of relative stand-alone selling price of each distinct good or service, or estimation approach if no distinct observable prices exist; and recognition of revenue when each performance obligation is satisfied. Credit risk will be presented separately as an expense rather than adjusted to revenue. For goods, the performance obligation would be satisfied when the customer obtains control of the goods. For services, the performance obligation is satisfied when the service has been provided, typically for promises to transfer services to customers. For performance obligations satisfied over time, an entity would select an appropriate measure of progress to determine how much revenue should be recognised as the performance obligation is satisfied. Contracts with customers will be presented in an entity's statement of financial position as a contract liability, a contract asset, or a receivable, depending on the relationship between the entity's performance and the customer's payment. Sufficient quantitative and qualitative disclosure is required to enable users to understand the contracts with customers; the significant judgments made in applying the guidance to those contracts; and any assets recognised from the costs to obtain or fulfil a contract with a customer. The consolidated entity will adopt this standard from 1 July 2017 but the impact of its adoption is yet to be assessed by the consolidated entity.

u. New, revised or amending Accounting Standards and Interpretations adopted

The consolidated entity has adopted all of the new, revised or amending Accounting Standards and Interpretations issued by the Australian Accounting Standards Board ('AASB') that are mandatory for the current reporting period.

Any new, revised or amending Accounting Standards or Interpretations that are not yet mandatory have not been early adopted.

Any significant impact on the accounting policies of the consolidated entity from the adoption of these Accounting Standards and Interpretations are disclosed below. The adoption of these

Accounting Standards and Interpretations did not have any significant impact on the financial performance or position of the consolidated entity.

The following Accounting Standards and Interpretations are most relevant to the consolidated entity:

AASB 2012-3 Amendments to Australian Accounting Standards - Offsetting Financial Assets and Financial Liabilities

The consolidated entity has applied AASB 2012-3 from 1 July 2014. The amendments add application guidance to address inconsistencies in the application of the offsetting criteria in AASB 132 'Financial Instruments: Presentation', by clarifying the meaning of 'currently has a legally enforceable right of set-off'; and clarifies that some gross settlement systems may be considered to be equivalent to net settlement.

AASB 2013-3 Amendments to AASB 136 - Recoverable Amount Disclosures for Non-Financial Assets

The consolidated entity has applied AASB 2013-3 from 1 July 2014. The disclosure requirements of AASB 136 'Impairment of Assets' have been enhanced to require additional information about the fair value measurement when the recoverable amount of impaired assets is based on fair value less costs of disposals. Additionally, if measured using a present value technique, the discount rate is required to be disclosed.

3. SIGNIFICANT ACCOUNTING POLICIES (continued)

u. New, revised or amending Accounting Standards and Interpretations adopted (continued)

AASB 2014-1 Amendments to Australian Accounting Standards (Parts A to C)

The consolidated entity has applied Parts A to C of AASB 2014-1 from 1 July 2014. These amendments affect the following standards: AASB 2 'Share-based Payment': clarifies the definition of 'vesting condition' by separately defining a 'performance condition' and a 'service condition' and amends the definition of 'market condition'; AASB 3 'Business Combinations': clarifies that contingent consideration in a business combination is subsequently measured at fair value with changes in fair value recognised in profit or loss irrespective of whether the contingent consideration is within the scope of AASB 9; AASB 8 'Operating Segments': amended to require disclosures of judgements made in applying the aggregation criteria and clarifies that a reconciliation of the total reportable segment assets to the entity's assets is required only if segment assets are reported regularly to the chief operating decision maker; AASB 13 'Fair Value Measurement': clarifies that the portfolio exemption applies to the valuation of contracts within the scope of AASB 9 and AASB 139; AASB 116 'Property, Plant and Equipment' and AASB 138 'Intangible Assets': clarifies that on revaluation, restatement of accumulated depreciation will not necessarily be in the same proportion to the change in the gross carrying value of the asset; AASB 124 'Related Party Disclosures': extends the definition of 'related party' to include a management entity that provides KMP services to the entity or its parent and requires disclosure of the fees paid to the management entity; AASB 140 'Investment Property': clarifies that the acquisition of an investment property may constitute a business combination.

v. Current and non-current classification

Assets and liabilities are presented in the statement of financial position based on current and non-current classification.

An asset is current when: it is expected to be realised or intended to be sold or consumed in normal operating cycle; it is held primarily for the purpose of trading; it is expected to be realised within twelve months after the reporting period; or the asset is cash or cash equivalent unless restricted from being exchanged or used to settle a liability for at least twelve months after the reporting period. All other assets are classified as non-current.

A liability is current when: it is expected to be settled in normal operating cycle; it is held primarily for the purpose of trading; it is due to be settled within twelve months after the reporting period; or there is no unconditional right to defer the settlement of the liability for at least twelve months after the reporting period. All other liabilities are classified as non-current.

Deferred tax assets and liabilities are always classified as non-current.

w. Fair value measurement

When an asset or liability, financial or non-financial, is measured at fair value for recognition or disclosure purposes, the fair value is based on the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date; and assumes that the transaction will take place either: in the principle market; or in the absence of a principal market, in the most advantageous market.

Fair value is measured using the assumptions that market participants would use when pricing the asset or liability, assuming they act in their economic best interest. For non-financial assets, the fair value measurement is based on its highest and best use. Valuation techniques that are appropriate in the circumstances and for which sufficient data are available to measure fair value, are used, maximising the use of relevant observable inputs and minimising the use of unobservable inputs.

Assets and liabilities measured at fair value are classified, into three levels, using a fair value hierarchy that reflects the significance of the inputs used in making the measurements. Classifications are reviewed each reporting date and transfers between levels are determined based on a reassessment of the lowest level input that is significant to the fair value measurement.

For recurring and non-recurring fair value measurements, external valuers may be used when internal expertise is either not available or when the valuation is deemed to be significant. External valuers are selected based on market knowledge and reputation. Where there is a significant change in fair value of an asset or liability from one period to another, an analysis is undertaken, which includes a verification of the major inputs applied in the latest valuation and a comparison, where applicable, with external sources of data.

3. SIGNIFICANT ACCOUNTING POLICIES (continued)

w. Fair value measurement (continued)

Fair value measurement hierarchy

The consolidated entity is required to classify all assets and liabilities, measured at fair value, using a three level hierarchy, based on the lowest level of input that is significant to the entire fair value measurement, being: Level 1: Quoted prices (unadjusted) in active markets for identical assets or liabilities that the entity can access at the measurement date; Level 2: Inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly or indirectly; and Level 3: Unobservable inputs for the asset or liability. Considerable judgement is required to determine what is significant to fair value and therefore which category the asset or liability is placed in can be subjective.

The fair value of assets and liabilities classified as level 3 is determined by the use of valuation models. These include discounted cash flow analysis or the use of observable inputs that require significant adjustments based on unobservable inputs.

4. FINANCIAL RISK MANAGEMENT

Overview

The Company and Consolidated Entity have exposure to the following risks from the use of financial instruments:

- Credit risk
- Liquidity risk
- Market risk

This note presents information about the Company's and the Consolidated Entity's exposure to each of the above risks, their objectives, policies and processes for measuring and managing risk, and the management of capital. Further quantitative disclosures are included throughout these consolidated financial statements. The Board of Directors has overall responsibility for the establishment and oversight of the risk management and monitors operational and financial risk management throughout the Consolidated Entity. Monitoring risk management includes ensuring appropriate policies and procedures are published and adhered to. The Management reports to the Audit Committee.

The Board aims to manage the impact of short-term fluctuations on the Company's and the Consolidated Entity's earnings. Over the longer term, permanent changes in market rates will have an impact on earnings.

The Company and the Consolidated Entity are exposed to risks from movements in exchange rates and interest rates that affect revenues, expenses, assets, liabilities and forecast transactions. Financial risk management aims to limit these market risks through ongoing operational and finance activities.

Exposure to credit, foreign exchange and interest rate risks arises in the normal course of the Company's and the Consolidated Entity's business. Derivative financial instruments are used to hedge exposure to fluctuations in foreign exchange rates.

The Audit Committee oversees adequacy of the Company's risk management framework in relation to the risks faced by the Company and the Consolidated Entity.

Credit Risk

Credit risk is the risk of financial loss to the Company or the Consolidated Entity if a customer, controlled entity or counterparty to a financial instrument fails to meet its contractual obligations and arises principally from the Company's and the Consolidated Entity's receivables from customers.

Trade and other receivables

The Company's and Consolidated Entity's exposure to credit risk is influenced mainly by the geographical location and characteristics of individual customers. The Consolidated Entity does not have a significant concentration of credit risk with a single customer.

Policies and procedures of credit management and administration of receivables are established and executed at a regional level. Individual regions deliver reports to management and the Board on debtor ageing and collection activities on a monthly basis.

4. FINANCIAL RISK MANAGEMENT (continued)

Overview (continued)

Trade and other receivables (continued)

In monitoring customer credit risk, the ageing profile of total receivables balances is reviewed by management by geographic region on a monthly basis. Regional management are responsible for identifying high risk customers and placing restrictions on future trading, including suspending future shipments and administering dispatches on a prepayment basis.

The Company and the Consolidated Entity have established an allowance for impairment that represents their estimate of incurred losses in respect of trade and other receivables.

Liquidity Risk

Liquidity risk is the risk that the Consolidated Entity will not be able to meet its financial obligations as they fall due. The Consolidated Entity's approach to managing liquidity is to ensure, as far as possible, that it will always have sufficient liquidity to meet its liabilities when due, under both normal and stressed conditions, without incurring unacceptable losses or risking damage to the Consolidated Entity's reputation.

The Consolidated Entity monitors cash flow requirements and produces cash flow projections for the short and long term with a view to optimising return on investments. Typically, the Consolidated Entity ensures that it has sufficient cash on demand to meet expected operational net cash flows for a period of at least 30 days, including the servicing of financial obligations. This excludes the potential impact of extreme circumstances that cannot reasonably be predicted, such as natural disasters.

Market Risk

Market risk is the risk that changes in market prices such as foreign exchange rates, interest rates and equity prices will affect the Company's and the Consolidated Entity's net profit or loss or the value of its holdings of financial instruments. The objective of market risk management is to manage and control market risk exposures within acceptable parameters, while optimising the return.

Currency Risk

The Consolidated Entity is exposed to currency risk on sales and purchases that are denominated in a currency other than the respective functional currencies of the controlled entities, primarily Australian dollars (AUD), but also United States dollars (USD), Euros (EUR), Swiss francs (CHF), Singapore dollar (SGD) and Japanese Yen (JPY). The currencies in which these transactions primarily are denominated are AUD, USD, EUR, CHF, SGD, JPY and Philippine Peso (PHP) and South Korean Won (KRW).

Over 90% (2014-89%) of the Consolidated Entity's revenues and over 85% (2014-82%) of costs are denominated in currencies other than AUD. Risk resulting from the translation of assets and liabilities of foreign operations into the Consolidated Entity's reporting currency is not hedged.

Interest Rate Risk

The Consolidated Entity is exposed to interest rate risks in Australia.

Capital Management

The Consolidated Entity's objectives when managing capital are to safeguard its ability to continue as a going concern, to provide returns to shareholders, to provide benefits to other stakeholders and to maintain an optimal capital structure to reduce the cost of capital.

The Board aims to maintain and develop a capital base appropriate to the Consolidated Entity. In order to maintain or adjust the capital structure, the Consolidated Entity can issue new shares. The Board of Directors undertakes periodic reviews of the Consolidated Entity's capital management position to assess whether the capital management structure is appropriate to meet the Consolidated Entity's medium and long-term strategic requirements. Neither the Company nor any of its subsidiaries is subject to externally imposed capital requirements. There were no significant changes in the Consolidated Entity's approach to capital management during the year.

5. Events occurring after reporting date

Since the end of the financial year, the directors are not aware of any matter that has significantly affected or may significantly affect the operations of the company in subsequent financial years other than as set out below.

SomnoMed Limited reached an agreement with its co-shareholder in SMH Biomaterial AG, Mr. Konrad Hofmann, to acquire his 50% holding in the company on 31st July 2015. The purchase price for the 50% holding in SMH Biomaterial AG amounts to 540,000 EUR. SomnoMed Limited paid 340,000 EUR (A\$519,243) in cash and 200,000 EUR (A\$301,569) in SomnoMed Limited shares, which were issued at the weighted average market price of the shares during the three months prior to completion.

6. Contingent liabilities

As at 30 June 2015 contingent liabilities and capital commitments consisted of the following:

- a) Pursuant to acquiring the MAS Nordic business in January 2013 and subject to the performance of SomnoMed's business in the Nordic region, additional SomnoMed shares to the value of approximately A\$30,000 may be issued in January 2016 as part of this acquisition.
- b) SomnoMed Inc. has received an assessment for sales tax due in relation to the sales of MAS devices in the State of California. The amount assessed is for sales made for the period up until 30 June 2015 is US\$698,148 (excluding penalties and interest). This assessment is based on the classification of the SomnoDent[®] MAS device as a "medical oxygen delivery system." SomnoMed and its advisors do not believe this classification is correct and are disputing the assessment.

7. Other significant information

N/A.

8. Foreign Accounting standards

9. NTA Backing

Net tangible asset backing per ordinary share

2015
2014
24.82 cents
9.10 cents

10. Earnings per Share

The following reflects the profit and share data used in the calculations of basic and diluted profit per share.

	2015	2014
Net profit used in calculating basic and diluted earnings per share	\$597,224	\$405,861
Basic profit per share (cents per share)	1.26	0.95
Diluted profit per share (cents per share)	1.20	0.92
Weighted average number of shares used in the calculation of diluted earnings per share	49,852,994	44,224,907
Weighted average number of shares used in the calculation of basic earnings per share	47,138,920	42,796,729
Shares on issue at year end	47,947,100	42,956,880
Number of options on issue at year end – each option is exercisable at between 87 cents and \$2.35 per share and converts to one ordinary share	935,000	805,000

Adjustment has been made to the weighted average number of shares used in calculating diluted earnings per share for the options on issue that have an exercise price below the average market price for the year.

	2015	2014
Shares on issue at end of year	50,935,600	44,856,380
Less: Share issued but not recorded in accounts (being shares issued to executives to acquire shares in the Company utilising funds advanced by the Company)	(2,988,500)	(1,899,500)
Number of shares recorded as issued capital in Company's accounts	47,947,100	42,956,880

11. Cash flow reconciliation

Reconciliation of operating profit after income tax to net cash outflow from operating activities	\$	\$
Operating profit after income tax	533,761	214,956
Share and option expense	199,802	125,003

Increase in receivables	(1,144,089)	(975,382)
Decrease in creditors & other payables	(720,839)	(510,466)
Increase in provisions	331,684	11,631
Increase in deferred tax assets	(138,816)	(303,011)
Net cash outflow from operating activities	(242,225)	(790,409)

SomnoMed Limited

Notes to the preliminary consolidated financial statements for the year ended 30 June 2015

12. Segment Operations

The Consolidated Entity produces and sells devices for the oral treatment of sleep related disorders primarily in the Asia Pacific region, the United States and Europe.

The Consolidated Entity has identified its operating segments based on the internal reports that are reviewed and used by the Board of Directors (chief operating decision makers) in assessing performance and determining the allocation of resources.

The Consolidated Entity is managed primarily on the basis of geographical segments and the operating segments are therefore determined on the same basis.

SomnoMed's operations during the period related to the production and sale of products treating sleep disordered breathing, which is the only business segment.

Basis of accounting for purposes of reporting by operating segments

Accounting policies adopted

Unless stated otherwise, all amounts reported to the Board of Directors as the chief decision maker with respect to operating segments are determined in accordance with accounting policies that are consistent to those adopted in the annual financial statements of the Consolidated Entity.

Unallocated items

The following items of revenue and expenses are not allocated to operating segments as they are not considered part of the core operations of any segment:

- -derivatives and foreign exchange gains and losses;
- -interest and other income;
- -corporate, research and development expenses;
- -income tax expense; and
- -amortisation of intangible assets.

Information about reportable segments

Geographic location:	Asia Pacific	USA	Europe	Total
2015	\$	\$	\$	\$
External sales revenue	3,445,499	14,534,636	16,457,768	34,437,903

Profit after tax				214,956

^{*} restated. Refer Note 15.

13. Acquisition of Subsidiaries and Restructuring

- a) As part of the acquisition agreement entered in July 2013 between SomnoMed Limited and OrthoSleep19 GmbH, SomnoMed paid \$95,936 (EUR 66,666) and issued SomnoMed Limited shares of \$95,395 (EUR 66,666) for the 2nd tranche of consideration in July 2014.
- b) As part of the acquisition agreement entered in January 2012 between SomnoMed Limited and Goedegeburre Slaaptechniek BV (GS), SomnoMed paid \$89,110 (EUR 63,126) and issued SomnoMed Limited shares of \$89,100 (EUR 63,126) for the 3rd tranche of consideration in April 2015.
- c) SMH Biomaterial AG is jointly owned by SomnoMed Limited (50%) and Mr Konrad Hofmann (50%) and in the 30 June 2013 accounts and prior to this date, this investment was considered an associated entity of SomnoMed and accounted for on an equity accounting basis. From 1 July 2013, Mr Hofmann entered into an employment arrangement with the SomnoMed group. As a result of this arrangement and other considerations SMH Biomaterial AG has been accounted for as a controlled entity from 1 July 2013 when the control is deemed to have occurred. The table and information detailed below summarises the changes made to the opening balances and results for the year due to the above:

		Accumulated	Non-controlling
	Reserve	Losses	Interest
	\$	\$	\$
Balance as reported at 30 June 2013	2,431,879	(17,097,069)	170,890
Effect of control of SMH	53,062	184,576	299,370
Balance at 1 July 2013	2,484,941	(16,912,493)	470,260

14. Acquisition of Non-Controlling Interest

In December 2014, SomnoMed Limited increased its shareholding in SomnoMed France to 92.9% following the acquisition of an additional 27.9% of the capital of SomnoMed France, by the conversion into equity of advances totalling \$883,392 (EUR 600,000) previously made to that company.

15. Prior period adjustment

Revenue recognition

As a result of its medical initiative, insurers are requesting SomnoMed to provide the services for a full treatment process of a patient, whereby medical insurers fully outsource this treatment to SomnoMed. In such cases SomnoMed receives revenue in addition to that received from the sale of MAS devices and incurs additional expenditure in generating that revenue. SomnoMed has historically recognized such revenue on a net basis only and not on the full proceeds received from the insurer. Given the changing nature of the business and after reviewing the relevant contracts, the Directors believe a more appropriate treatment is to record the gross amount received from the insurance company as sales revenue and to reflect this under managed care revenues, with the associated costs of providing these services treated as cost of goods sold.

The gross accounting treatment has been applied during the current year. The directors believe this treatment will result in providing more relevant and reliable financial reporting, given the changing nature of the company's business. Prior period revenues and expenses have been adjusted and restated to be consistent with the current year's revenue recognition treatment based on the terms of the contracts with insurers.

The impact of the change on the consolidated financial information for the prior year ended 30 June 2014 is disclosed below. Earnings per share were not affected as there was no net profit or loss impact as a result of this adjustment.

		Consolidated	
Statement of profit or loss and other comprehensive income	2014 as reported \$	Adjustment	2014 restated \$
Extract			
Sales revenue	25,894,846	4,379,750	30,274,596
Cost of sales	(9,085,059)	(4,379,750)	(13,464,809)
Statement of cash flows			
Extract			
Receipts from customers (inclusive of GST)	25,137,579	4,379,750	29,517,329
Payments to suppliers and employees (inclusive of GST)	(25,442,438)	(4,379,750)	(29,822,188)

16. Fair values

Fair value hierarchy

The table below analyses financial instruments carried at fair value, by valuation method. The different levels have been defined as follows:

- Level 1: quoted prices (unadjusted) in active markets for identical assets and liabilities
- Level 2: inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly (ie. as prices) or indirectly (ie. derived from prices).
- Level 3: inputs for the asset or liability that are not based on observable market data (unobvious inputs).

	Level 3	Total
30 June 2015		
Financial liabilities		
- Contingent consideration payable	1,059,575	1,059,575
30 June 2014		
Financial liabilities		
- Contingent consideration payable	2,230,642	2,230,642

There are no other financial instruments carried at fair value or valued using the above criteria.

Assets and liabilities held for sale are measured at fair value on a non-recurring basis.

There were no transfers between levels during the financial year.

The carrying amounts of trade and other receivables and trade and other payables are assumed to approximate their fair values due to their short-term nature.

Valuation techniques for fair value measurements categorised within level 3

The fair value of financial liabilities is estimated by discounting the remaining contractual maturities at the current market interest rate that is available for similar financial liabilities.

The fair value of contingent consideration payable in relation to the Goedegebuure Slaaptechniek B.V. acquisition is based on an assessment of budgets and forecasts resulting in the fair value for the remaining 25% acquisition of the business. Contingent consideration in relation to the Orthosleep 19 acquisition has been assessed using current year and budgeted sales volumes and profits.

Contingent consideration payable	2015	2014
	\$	\$
