RWC launches smart home water monitoring technology solution

Reliance Worldwide Corporation Limited (ASX: RWC) ("RWC") advises that it released its first smart home water monitoring technology solution ("StreamlabsTM"¹) at the Consumer Electronics Show, CES 2018, in Las Vegas, Nevada this week. The release of Streamlabs represents RWC's long-standing strategy to merge its proven rough plumbing products of water conveyance (pipes and fittings) and water control devices with the overlay of modern-day digital and mobile technology. With this smart water monitoring product release, RWC continues to pioneer the industry and demonstrate its strategic vision to keep pace with changing market demands and consumer preferences by delivering state-of-the art engineered plumbing solutions.

The Streamlabs water monitoring solution is the first product in an innovative series being developed as smart home solutions under the banner of "Internet of WaterTM"¹. Streamlabs utilises water monitoring technology to capture and report real-time water flow data in a meaningful way coupled with a non-invasive installation method. RWC will initially market and sell the Streamlabs device to end users in the USA. RWC plans to expand sales into other international markets in the future.

RWC Global CEO, Mr. Heath Sharp said: "Smart home technology products for use in the home are rapidly gaining the attention of consumers. With Streamlabs, we are combining our proven experience in developing engineered water control systems and plumbing manufacturing with the Internet of Things (IoT) and mobile technologies to offer a water monitoring and conservation solution to consumers."

Mr. Sharp continued: "Streamlabs is a non-invasive wireless device offering proactive leak defence and remote water monitoring capabilities to consumers, property managers and plumbing professionals through a custom designed mobile application. The technology provides us with an opportunity to integrate with connected hubs such as the Amazon Alexa¹ and Google Nest¹ as well as paving the way to introduce future non-traditional technology innovations to our products."

Further information on Streamlabs is available at <https://streamlabswater.com>.
