Aeris Active is Approved for Sale in the United Kingdom

Aeris Environmental Ltd (Aeris) has been notified by the UK Poison Control Centre that its patented hospital-grade hard surface disinfectant, Aeris Active, with residual and validated activity against viruses, has been approved for sale in the United Kingdom (UK). The UK is a major international trading power, with the fifth-largest economy in the world according to the World Bank Group, and the second-largest economy in Europe, with a population of more than 65 million people.

Aeris Active contains a 'dual active' biocide system, providing broad spectrum viricidal, bactericidal and fungicidal efficacy, together with proprietary 'residual protection' affording, in addition to the initial kill, long-term (200 touch or seven day) protection of at-risk surfaces.

Peter Bush, Chief Executive Officer, commented:

"Aeris is pleased to be able to announce the expansion of its breakthrough product Aeris Active into the UK, as part of the growth of our global distribution footprint of approved countries for Aeris' proprietary environmental hygiene portfolio. The key features of Aeris' rapid, broad spectrum kill, environmental profile and, most importantly, the unique validation of our "multi-touch" residual protection is driving rapidly increasing demand from many key international markets. Aeris expects to be launching several additional human and environmental hygiene products into both the domestic and international markets during the next quarter. It is anticipated that these sales will be material."

ABOUT AERIS ENVIRONMENTAL LTD

Aeris develops, manufactures and markets proprietary, environmentally-friendly technology that drives measurable improvements in asset performance and sustainability. Aeris' whole-of-system approach ensures that systems perform better, are safer, last longer and cost less to run.

Aeris' products solve real-world problems more effectively than conventional toxic chemicals. Uniquely based on validated, green formulations, Aeris' enzymes and treatments with residual protection provide long-term remediation, and prevention of mould, bacteria growth, corrosion and improved hygiene.

AerisVIEW, the Company's cloud-based visualisation network, is uniquely scalable across all climate-controlled environments, including buildings of all sizes, and vehicles. Aeris' solution delivers dramatic and proven energy savings, alongside documented benefits to system efficiency, and independently-validated indoor air quality with proven immediate improvements in sustainability and cash flow savings.
