

OPERATING UPDATE – PEAK SHAFT ORE HOISTING RECOMMENCED

Aurelia Metals Limited (“**AMI**” or the “**Company**”) provides an operating update on the previously reported fault in the Peak Mine shaft.

Shaft hoisting operations at the Peak Mine were halted over the weekend of 21/22 March 2020 to investigate a fault that was detected in the conveyance guide system.

Remedial works have been carried out on the guide rope system and normal ore hoisting operations have recommenced. Man-riding operations remain suspended pending further investigation, potential remedial works and re-commissioning.

While man-riding remains suspended, the Peak Mine surface decline is being used to transport mine workers underground.

This announcement has been authorised for release to the ASX by the Aurelia Board
