# Global supply chain market conditions

Constrained capacity resulting in increasing freight rates, accelerating digitisation & consolidation

## Global trade

- 'Goods-led' recovery in global trade has continued in 2021, with consumer demand buoyed by various country-specific COVID-19 fiscal stimulus support packages<sup>1</sup>
- This has boosted demand for manufacturing and global trade, resulting in:
  - constrained capacity
  - supply chain bottle-necks
  - increased freight rates

## Freight

- Air freight strongly impacted by decline in availability of belly freight on passenger flights due to COVID-19
- Capacity constraints driving up freight rates, ~2X air rates on China-EU/US routes<sup>2</sup>
- Container shipping not as significantly impacted by restrictions but affected by:
  - geographically unbalanced demand causing vessel and container shortages
  - port access challenges and congestion
- Shanghai Containerized Freight Index ~4X pre-COVID-19 levels<sup>3</sup>
- Freight capacity investment increasing to prepare for growth post-COVID-19

## Structural changes

- Whilst short term freight rate increases do not translate into immediately increased WiseTech revenue, they do lead to acceleration of:
  - replacement of customers' legacy systems
  - demand for integrated global software solutions with increased visibility
- CargoWise customers driving growth and industry consolidation via M&A, such as:
  - DHL's recently announced acquisition of JF Hillebrand
  - JAS Worldwide's recently announced acquisition of Greencarrier
  - DSV statement re interest in acquiring DB Schenker

  - See Appendix for sensitivity analysis
- 4 Operating Expenses:**
  - ~\$40m cost reduction run rate for FY22, \$13.8m net benefit achieved in FY21, results in ~\$26m net cost reductions in FY22 vs. FY21
  - ~\$70m – \$80m additional cost investments to support long-term growth, staff retention and post COVID-19 activities

**Guidance provided in line with these assumptions and those in the Appendix, slide 29.**

Uncertainty around future economic and industrial production growth and pandemic stimulus measures may lead to alternative outcomes.

Prevailing uncertainties relating to sovereign and geopolitical risk may also reduce assumed growth rate.
