Coolgardie Progress Summary

Based on work carried out during the quarter, Focus announced subsequent to quarter-end a significant increase in CNX's Mineral Resource (refer ASX announcement dated 28 October 2021) that included a 31% increase in total Measured + Indicated + Inferred Mineral Resource. The CNX Mineral Resource is truncated 97m north of the Great Eastern Highway centreline. The updated CNX open pit Mineral Resource is reported on a dry tonnage basis using a 0.5 g/t Au cut-off to 200mRL (depth of 230m):

Classification	Tonnage (Mt)	Au Grade (g/t)	Contained Au Oz
Measured	2.8	1.39	125,500
Indicated	0.7	1.33	30,000
Inferred	1.3	1.25	53,500
Total Mineral Resource	4.8	1.34	209,000

Drilling across CNX delivered the following significant intersection results, calculated using 0.5g/t cut off and up to 3m internal dilution include:

- 20CNRC001 - 37m @ 3.49g/t from 59m (GxM 129)
- 21CNDD004 - 20m @ 5.2g/t from 178m (GxM 104)
- 21CNRD040 - 56.05m @ 1.36g/t from 122.95m (GxM 76)
- 21CNRD027 - 10m @ 7.14g/t from 185m (GxM 71)
- 21CNRD041 - 33m @ 1.64g/t from 135m (GxM 54)
- 21CNRD052 - 20m @ 2.65g/t from 111m (GxM 53)
- 21CNRD039 - 8m @ 6.46g/t from 101m (GxM 52)
- 21CNRD045 - 9m @ 4.39g/t from 18m (GxM 40)
- 21CNRC026 - 15m @ 2.57g/t from 95m (GxM 38)
- 21CNRC026 - 10m @ 3.27g/t from 118m (GxM 33)

- Drilling to date assays as per the inset legend
- 2020/21 drilling with thick black drill traces
- High-grade, south-east dipping structural fabric marked with white dashed arrows
- Historic 1991 pit location is marked with dashed black line and production figure is labelled
- Red polygon marks the limit of Measured and Indicated Mineral Resources
- Yellow polygon marks the location of Indicated and Inferred Mineral Resource areas to be targeted for resource upgrade in 2022

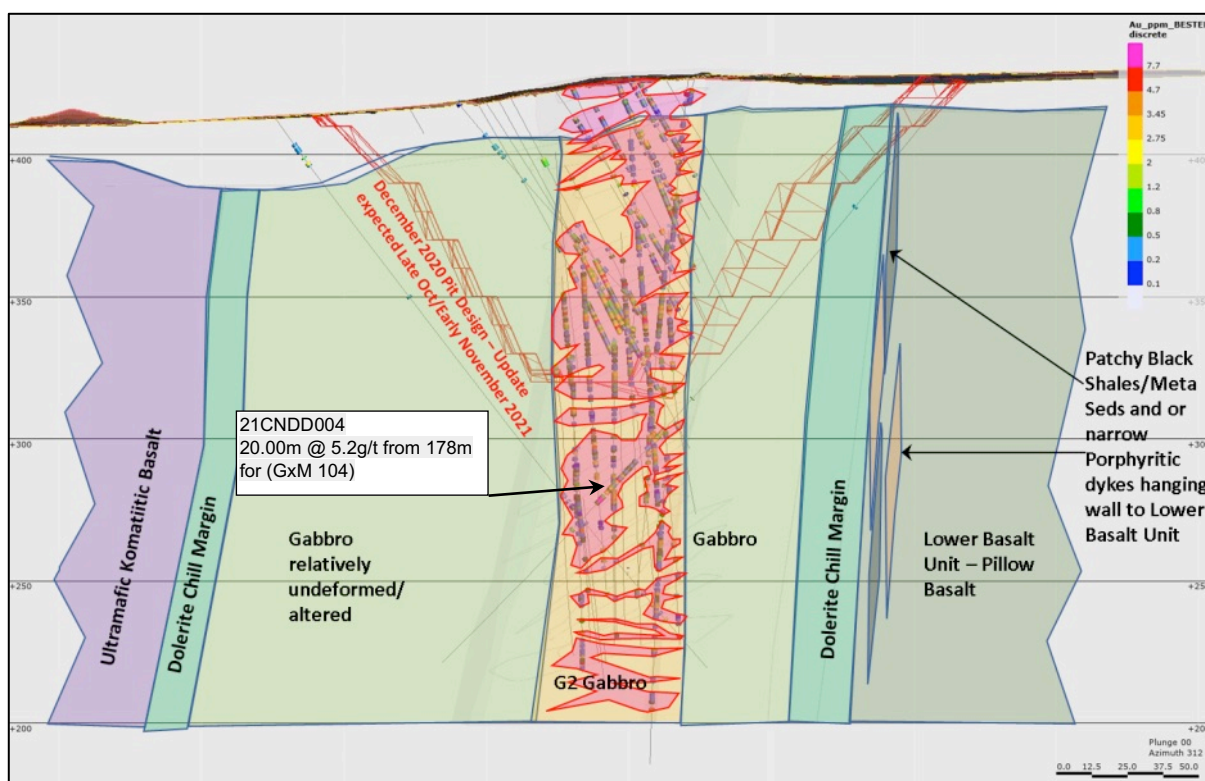

Figure 3: Sectional view north-west of the interpreted cross section 20CNDD004. The sub-vertical yellow polygon shows the location of the modelled G2 Gabbro that hosts the majority of the CNX mineralisation. The labelled significant intersection was calculated using a 0.5g/t cut-off and up to 3m internal dilution. Red polygons show the location of the bulk-style CNX mineralisation. A preliminary pit design that was developed to assess the December 2020 CNX Mineral Resource update is also shown.

Metallurgical test work for CNX indicates excellent gravity and leach recoveries from fresh ores. Gravity gold recovery for the three samples was very high with a range of 62.5% to 80.6%, which will have a positive impact on follow-up leaching. Leach recovery of the samples post-gravity recovery showed excellent recovery ranging from 96.9% to 98.2%, resulting in very low tenor leach tails and low reagent consumption.

Progress continues on updated feasibility works at Coolgardie, in preparation for a resumption of gold mining operations, including:

- Heritage surveys completed at Greenfields and CNX and continuing for additional mining and related infrastructure areas;
- Hydrogeological assessment is advanced and water table monitoring underway;
- Material classification was significantly advanced for the CNX and Greenfields deposits. A material classification program is now being expanded to additional deposits;
- Preparations have been made ahead of updated flora fauna surveys, due to complete this spring;
- Initial stakeholder identification and engagement began for key Coolgardie deposits, which will lead into follow-up permitting works; and
- Detailed geotechnical work was completed for the CNX and Greenfields deposits.

Resource drilling at the Green Light deposit was completed ahead of a maiden Mineral Resource calculation, which is expected to be completed in the December 2021 Quarter.

Laverton Gold Project

The Laverton Gold Project (**Laverton**) covers 362km² of highly prospective tenements, including the historic Lancefield and Chatterbox Trend mines, on the outskirts of the Laverton township in the Goldfields region. About Focus Minerals Limited (ASX: FML)

Focus Minerals is a Perth-based, ASX-listed gold exploration company focused on delivering shareholder value from its 100%-owned Coolgardie Gold Project and Laverton Gold Project, in Western Australia's Goldfields.

Focus is committed to delivering shareholder value from the Coolgardie Gold Project, a 138km² tenement holding that includes the 1.4Mtpa processing plant at Three Mile Hill (on care and maintenance), by continuing exploration and value-enhancing activities. An updated PFS in September 2020 highlighted the potential for a low capital cost, fast-tracked return to mining at Coolgardie and delivered an NPV_{7.5%} of \$183 million. The Company's efforts are now focused on increasing production-ready Mineral Resources at Coolgardie and delivering the approvals and permits required for a resumption of gold-mining operations.

The Laverton Gold Project covers 362km² area of highly prospective ground that includes the historic Lancefield and Chatterbox Trend mines. Focus' priority target is to confirm sufficient gold mineralisation at the Beasley Shear Zone, Lancefield-Wedge Thrust, Karridale and Burtville to support a Stage 1 production restart at Laverton. In parallel, Focus is working to advance key Laverton resource growth targets including Sickie, Ida-H and Burtville South. Focus has delivered first results from a progressive Pre-Feasibility Study (Pre-Tax NPV_{5.0%} A \$132M) and is advancing study work utilising Laverton's expanded Mineral Resource position.
