Retail Segment

- Customer loyalty and satisfaction continued to strengthen with interaction NPS remaining at record highs. Net customer churn continued to decline to the lowest level in two years.
- Customer numbers increased in the quarter, up 3,400. This was driven by lower churn, increased acquisitions and the launch of Frank Energy.
- Electricity netback declined on pcp, due to a one-off release in Q4 FY21. Gas netback continued to grow strongly as higher wholesale gas and carbon prices were passed on.
- LPG volumes were down across residential and business driven by warmer weather conditions. Higher transport fuel and staffing costs contributed to a decline in netback on pcp.
- In a competitive market, Genesis continued to focus C&I sales on high value customers and deeper energy management engagement with existing customers, achieving better margin on lower volume. Gas netbacks grew strongly.

Wholesale and Kupe Segments

Wholesale Segment

- Strong rainfall across the North Island enabled Genesis to increase hydro generation in the quarter while building storage. After logistical delays, the Tuai generator replacement is expected to be completed by the end of July.
- Genesis continued to build storage at the Huntly stockpile, with further deliveries through the quarter at prices below the current market.
- Wholesale gas sales declined, following the roll off of long term sales contracts that were not renewed.

Kupe Segment

- Kupe production was up on pcp, following completion of inlet compression project. Field production continued to decline through the quarter.
