### Loy Yang A Unit 2 Generator Fault – Update on expected return to service

12 September 2022

AGL Energy Limited (AGL) today provided a further update on the expected return to service of Loy Yang A Unit 2.

AGL advised that during testing in the final assembly of the generator rotor at Loy Yang A Unit 2, a defect in a part was identified that requires the Original Equipment Manufacturer GE to manufacture in Switzerland. The outage is now expected to extend until the second half of October 2022 and AGL will make further changes to the outage profile of other units to accommodate this change.

As previously announced, AGL will provide FY23 earnings guidance at the end of September, which will reflect the extension of the Loy Yang A Unit 2 outage and the initial outcomes from the review of AGL's strategic direction (announced on 30 May 2022). At this stage it is not expected that the further extension of the Loy Yang A Unit 2 outage will have a material impact on AGL's FY23 earnings guidance given the impact of the extension is expected to be offset by strong performance of the portfolio during August and September as other units have returned to service.

Authorised for release by AGL's Market Disclosure Committee.
