

## Adherium Awarded UK National Health Service's SBRI Healthcare Monitoring Project

**Melbourne, Australia – 18 January 2023:** Adherium Limited ("Adherium" or "the Company"; ASX: ADR), a leader in respiratory eHealth, remote patient monitoring and data management solutions, is pleased to announce a £499,871 (approximately \$880,000) award for a pathfinder service development project from the UK National Health Service's Small Business Research Initiative Healthcare¹ (SBRI Healthcare).

The project is titled "Smart Digital inhaler enabled asthma management in high-risk children aged 5 to 16 years managed in primary care to prevent asthma attacks." Children with asthma often have flare-ups that require hospitalisation. This project will use Hailie® digital inhalers that alert the child and display usage on the family's smartphone. Via the web, the medical team can monitor and support families and their child's medication; with the aim to reduce these asthma attacks.

"This is a unique opportunity and privilege to reach high risk children early and potentially save them and their families from the repeated challenge of exacerbations. These cause distress and can lead to emergency department visits and hospitalisation" says Francis White, Adherium's VP of Global Business Development.

This project, to be completed by December 2023, deploys Adherium's clinically proven Hailie® Digital Inhaler Solution to a real-world setting, offering early intervention and monitoring to children that fulfil the criteria of a high-risk, high-likelihood of exacerbations.

Adherium's partner, Helicon Health Ltd, will be working with the research team led by Dr Erol Gaillard at the University of Leicester, to identify patients in primary care and offer them the Hailie system. The project is also backed by the Leicester Integrated Care Board. East Midlands AHSN.

About Adherium (ASX: ADR)

Adherium is a provider of integrated digital health solutions and a worldwide leader in connected

respiratory medical devices, with more than 180,000 sold globally. Adherium's Hailie® platform

solution provides clinicians, healthcare providers and patients access to remotely monitor

medication usage parameters and adherence, supporting reimbursement for qualifying patient

management.

The Hailie® solution includes a suite of integration tools to enable the capture and sharing of

health data via mobile and desktop apps, Software Development Kit (SDK) and Application

Programming Interface (API) integration tools, and Adherium's own broad range of sensors

connected to respiratory medications. Adherium's Hailie® solution is designed to provide

visibility to healthcare providers of medication use history to better understand patterns in patient

respiratory disease.
