

ASX Release
20 October 2023

QUARTERLY ACTIVITIES REPORT FOR PERIOD ENDING 30 SEPTEMBER 2023

Highlights

Mackay Potash Project

- Appointment of Debbie Morrow as the Company's Managing Director and Chief Executive Officer
- Front End Engineering Design ("FEED") works continued with additional process testwork completed in collaboration with leading equipment vendors
- Environmental Impact Assessment responses submitted to Western Australian Environmental Protection Authority
- State Government has commenced sealing of the Tanami Road, which is a key section of public road to be used during Agrimin's planned trucking operations

Business Development

- Evaluation of the Beyondie Potash Mine
- Review of exploration potential across Agrimin's tenure in the highly prospective West Arunta region

Corporate

- Cash balance of \$1.0 million as at 30 September 2023
- Firm commitments for a placement to raise gross proceeds of \$3.2 million, subsequent to the end of the quarter

Agrimin Limited (ASX: AMN) ("Agrimin" or "the Company") is pleased to report its activities for the quarter ending 30 September 2023.

Mackay Potash Project – Western Australia (100% owned)

Agrimin’s vision is to establish the Mackay Potash Project (“**the Project**”) as the world’s leading seaborne supplier of Sulphate of Potash (“**SOP**”) fertiliser, to develop the Project with sustainability principles at its core and to empower local Indigenous communities throughout the Project’s long life.

The Project is situated on Lake Mackay in Western Australia, the largest undeveloped potash-bearing salt lake in the world. Lake Mackay hosts significant volumes of brine (hypersaline groundwater) containing dissolved potassium and sulphur which can produce high-grade, water-soluble SOP fertiliser.

SOP has a low salt index and is virtually chloride-free, making it ideal for use on high value crops such as fruits and vegetables. Agrimin’s SOP is certified as an allowable input for use in organic production systems.

The Project is located 940km by road south of the Wyndham Port in Western Australia (**Figure 1**). It comprises nine granted Exploration Licences covering over 3,000km² in Western Australia and four Exploration Licence applications covering over 1,200km² in the Northern Territory. The closest community to the Project is Kiwirrkurra which is located approximately 60km south-west. A Native Title Agreement is in place and provides the necessary consents for the Project’s development and operation within the Kiwirrkurra determination area.

Figure 1. Project Location Map

The Project's development plan is based on the sustainable extraction of brine from Lake Mackay using a network of shallow trenches. Brine will be transferred along trenches into a series of solar evaporation ponds located on the salt lake's surface. Raw potash salts will crystallise on the floor of the ponds and be collected by wet harvesters and pumped as a slurry to the processing plant located off the edge of the salt lake. The plant will refine harvested salts into high quality finished SOP fertiliser ready for direct use by customers. SOP will be hauled by a dedicated fleet of road trains to a purpose-built storage facility at Wyndham Port. At the port, SOP will be loaded via an integrated barge loading facility for shipment to customers.

The Definitive Feasibility Study ("DFS") for the Mackay Potash Project was completed in July 2020. The DFS demonstrated the Project's globally significant scale and that once in operation it could be the world's lowest cost source of seaborne SOP. The Project also offers excellent potential to expand over time to meet the expected growth in demand for SOP.

The Independent Technical Review ("ITR") of the DFS and Project was completed in April 2021 by Advisian Pty Ltd, a subsidiary of the Worley Limited group of companies. The ITR report concluded that, based upon the data described in the report, the identified project risks are not expected to impact the technical and financial viability of the Project, particularly when considering the FEED work programs and mitigations that are planned to occur prior to the Company making a Final Investment Decision ("FID").

Agrimin's commitment to a sustainable and ESG-friendly development was embodied throughout the DFS and the Project will deliver on a number of metrics, including:

- Strong engagement with Indigenous people and Traditional Owners, as well as support for important land management and community programs;
- Significant commitment to training and employment opportunities for Indigenous people, particularly in relation to the road haulage operation;
- High renewable energy penetration to deliver very low greenhouse gas emissions along with one of the lowest carbon footprints associated with any macro-nutrient fertiliser product; and
- Creation of critical new seaborne SOP supply to help developing countries achieve their food security goals, especially with respect to increasing demand for high value crops such as fruits, vegetables, tree nuts and grape-vines.

The Mackay Potash Project is now advancing toward a FID. Current activities include:

- Project funding and strategic partnerships;
- FEED works, execution planning and contracting; and
- Mining tenure and environmental approvals.

Product Marketing and Project Funding

The Company has signed three Binding Offtake Agreements with Sinochem Fertilizer Macao Limited, Nitron Group and MacroSource (formerly Gavilon Fertilizer) for the supply of 150,000tpa, 115,000tpa and 50,000tpa of SOP, respectively. The Company has committed its target of 70% of planned SOP production capacity under long-term binding offtake agreements and discussions with potential project partners and financiers continue.

Appointment of Debbie Morrow as the Company's Managing Director and Chief Executive Officer

During the quarter, the Company announced that Mark Savich will step down as the Company's Chief Executive Officer and that highly regarded senior resources executive Debbie Morrow had been appointed as the Company's Managing Director and Chief Executive Officer.

Ms Morrow is a highly accomplished executive with extensive experience leading large-scale projects and a range of senior corporate and sustainability roles across the energy and mining sectors. Ms Morrow had a 20 plus-year career with global oil and gas company Woodside Energy Ltd. More recently, she was a C-Level Executive of ASX 100 mining company OZ Minerals Ltd, responsible for overseeing the development of the company's growth projects.

Highly regarded as an authentic leader with infectious passion and energy, Ms Morrow has a reputation in strategy development and has a track record of converting vision into outcomes. Underpinned by commercial acumen, she is skilled at leading teams and creating strong connections with all internal and external stakeholders.

Mr Savich will continue with the Company as an Executive Director until the end of 2023 to ensure a smooth management transition.

Appointment of Michael Hartley as the Company's Chief Operating Officer

Michael Hartley has been appointed as Chief Operating Officer of Agrimin. Michael is a qualified Hydrogeologist and has been General Manager, Principal Hydrogeologist and Project Manager of Agrimin since 2017. He has significant experience in leading the technical advancement and project development of minerals in brine resources.

Appointment of Rhys Bradley as the Company's Chief Financial Officer

In accordance with ASX Listing Rule 3.16.1, Agrimin advises that Rhys Bradley has been appointed as Chief Financial Officer of Agrimin. Rhys is a Chartered Accountant and has been Chief Commercial Officer of Agrimin since 2017. He has significant experience with the Company's Projects and with financial and capital markets.

Front End Engineering Design

Since completion of the DFS, the Company's integrated owner's team, supported by Turner & Townsend JukesTodd as project management consultant, has been progressing several FEED work streams. The outcomes of the FEED phase will provide a greater degree of accuracy for operating and capital costs, as well as minimise the risk of material changes during the execution phase of the Project.

During the current FEED phase, an extensive technical review of the process flowsheet and associated testwork database, together with the reported experiences of other SOP projects in Western Australia, has led to the requirement for additional process testwork to be completed. This additional testwork will aim to de-risk the Project's start-up stage by demonstrating the targeted potash-bearing salt mineral can be consistently produced from the expected harvest salt feed during Project's start-up stage.

This additional process testwork has commenced in collaboration with a leading crystallisation vendor to test and confirm the optimal harvest salt preparation under a range of operating conditions for the conversion reactor. The conversion reactor is integral to the downstream processing stages and once testing is advanced it will facilitate further testwork to confirm the subsequent flotation process.

Harvest salts collected at various stages during the field evaporation trial at Lake Mackay have been prepared for conversion testwork and sent to vendors for additional analysis. The testwork program will focus on better understanding the range of process conditions for the front end of the process flowsheet with a focus on variable grade harvest salts that may be present during the start-up stage of the Project before steady-state conditions are reached. By testing a range of possible conditions, the Company aims to improve the robustness of its process design for conversion and for downstream processing.

The results of the testwork programs will be used to refine the process design and determine the subsequent phase of testing the flotation and crystallisation steps. During the current FEED phase, the Company completed a civil construction trial to increase the understanding of on-lake construction and operation of the Project's brine extraction trenches and solar evaporation ponds. The trial results will also be used to build on the Company's geotechnical data for the lake, confirm key equipment selections and validate remaining assumptions of the construction methodology.

The Company has also completed site-based testwork for the salt harvesters and geotechnical sampling and testwork for the sealed haul road. Additionally, the Company has worked with its proposed power contractor to refine the Project's site power station design which has resulted in a hybrid diesel, solar, wind and battery solution with a modelled renewable energy penetration of 84%.

Project Approvals

The Mackay Potash Project is currently being assessed by the Western Australian Environmental Protection Authority ("EPA"). The EPA's assessment is an accredited process under a bilateral agreement with the Commonwealth Government, and therefore the Project will not require a separate assessment by the Commonwealth Department of Climate Change, Energy, the Environment and Water.

During the quarter, the Company responded to comments from the EPA in relation to the Environmental Review Document and it continues to work closely with the EPA to ensure its information requirements are met in the most efficient way. Recent communication with the EPA has indicated feedback on the latest round of Response to Submissions will be received by the end of October. Based on statutory guidelines the indicative timeline for EPA approval is for Q2 2024.

The Company is also progressing other outstanding approvals, licences and agreements, which include:

- Department of Mines, Industry Regulation and Safety – Miscellaneous Licences, Mining Lease, Mining Proposal and Mine Closure Plan approvals;
- Department of Water and Environmental Regulation – Works Approval and Licence; and
- Agreement with Tjurabalan Native Title Lands (Aboriginal Corporation) RNTBC ("Tjurabalan") for the grant of a Miscellaneous Licence over the proposed haul road.

Since signing a negotiation protocol in August 2021, Agrimin and Tjurabalan have conducted a thorough and constructive negotiation process based on productive dialogue. The negotiations with Tjurabalan are meaningfully advanced and the Company is hopeful it can move to sign a Native Title Agreement with Tjurabalan relating to the haul road before the end of 2023.

Government and Community Engagement

The Company continues its active engagement in local communities and across all levels of Federal, State and Local Government. The Mackay Potash Project enjoys strong support in local communities, particularly given the employment opportunities and economic infrastructure that the Project will create. The Project is expected to create approximately 200 direct full-time jobs and support over 600 jobs through the regional supply chain over its 40 year life, generating valuable long-term opportunities for Indigenous people living in Central Desert communities, as well as people living throughout the broader Kimberley region.

Newhaul Bulk Pty Ltd (the strategic haulage joint venture between Agrimin and Newhaul Pty Ltd) continues to progress plans to establish a Driver Training Academy to maximise the number of local employees and provide further opportunities for local employment and skills training presented by the Project's development. The Driver Training Academy will aim to provide inspiring pathways for young people in Central Desert, East Pilbara and Kimberley communities who are interested in pursuing a long-term career in logistics.

Lake Auld Potash Project – Western Australia (100% owned)

The Company continues its consultations with Western Desert Lands Aboriginal Corporation (Jamukurnu-Yapalikunu) RNTBC, the Native Title representative body for the Martu people.

The Lake Auld Potash Project is located approximately 640km south-east of Port Hedland, Western Australia (**Figure 1**). The Lake Auld Potash Project consists of a granted Exploration Licence covering a lakebed area of 108km² across Lake Auld. Lake Auld's exceptionally high grades, favourable climatic conditions for solar evaporation and proximity to a major operating port support the potential for strong economics.

The Lake Auld Potash Project is neighboured either side by the Company's existing Exploration Licence applications which cover the Canning Palaeovalley, including the remainder of Lake Auld and Percival Lakes. The Company's tenements cover the most prospective portion of the 450km long lake system where historic sampling of brine has returned the highest known in-situ SOP grades from an Australian salt lake.

Corporate Activities

Share Issues

No ordinary shares or other securities were issued during the quarter.

Firm commitments were received for a placement to raise gross proceeds of \$3.2 million, subsequent to the end of the quarter. The Placement was conducted at an issue price of \$0.15 per ordinary share in the Company, with a free attaching unlisted option exercisable at \$0.20 each within 3 years of issue, resulting in approximately 21.3 million Shares and 21.3 million Options to be issued.

Funds raised will be used to progress Agrimin's flagship Mackay Potash Project to being fully permitted, for additional FEED works and to progress exploration potential in the West Arunta.

Business Development

During the quarter, Agrimin evaluated the acquisition of the Beyondie Potash Mine. On 4 October 2023, Agrimin announced it had given a notice of termination of the Share Sale Agreement to Kalium Lakes Limited (Administrators Appointed) (Receivers and Managers appointed) (“**Kalium**”), thereby terminating the contract in accordance with its terms. Notwithstanding Agrimin’s termination of the Share Sale Agreement and in line with Agrimin’s commitment to deliver successful outcomes to the WA SOP industry, the Company will continue to assess potential opportunities regarding the Beyondie Potash Mine.

Agrimin holds a 40% interest in Tali Resources Pty Ltd, a private company which has Exploration Licences in Western Australia that are subject to a Farm-in and Joint Venture Agreement with Rio Tinto Exploration Pty Ltd. An RC drilling program was completed during the quarter. Tali Resources Pty Ltd also holds 8,525,000 shares in WA1 Resources Ltd (ASX: WA1), which currently has a share price of \$4.66 per share.

During the quarter, the Company commenced a review of the exploration potential across its tenure in the highly prospective West Arunta region. Agrimin’s tenure is contiguous to WA1 Resources Ltd and Encounter Resources Limited where multiple mineralised carbonatites have been discovered.

Summary of Expenditure Incurred on Activities

The Company incurred expenditure of \$596,000 which for accounting purposes has been allocated to exploration and evaluation activities during the quarter. No expenditure was allocated to development or production activities during the quarter. Exploration and evaluation expenditure during the quarter primarily related to FEED works, environmental approvals and project financing.

Payments to Related Parties of the Entity

A description of and explanation for payments to related parties and their associates per Section 6.1 of the Appendix 5B for the quarter ending 30 September 2023 is set out below (**Table 1**).

Table 1. Payments to Related Parties of the Entity and their Associates

Item	Current Quarter (A\$)	Previous Quarter (A\$)
Directors’ Remuneration		
CEO Salary and Superannuation	37,000	82,500
Executive Director Fee and Superannuation	82,500	-
Non-Executive Director Fees	57,750	57,625
Company Secretarial Fees	9,000	9,000
Total payments to related parties of the entity and their associates	186,250	149,125

Tenement Interests

Table 2. Schedule of Tenement Interests as at 30 September 2023

Tenement Ref.	Project	Holder	State	Status	Interest
Exploration Licences					
E80/4887	Mackay Potash	Agrimin Potash Pty Ltd	W.A.	Granted	100%
E80/4888	Mackay Potash	Agrimin Potash Pty Ltd	W.A.	Granted	100%
E80/4889	Mackay Potash	Agrimin Potash Pty Ltd	W.A.	Granted	100%

This ASX Release is authorised for market release by Agrimin's Board.

About Agrimin

Based in Perth, Agrimin Limited is a leading fertiliser development company focused on the development of its 100% owned Mackay Potash Project. The Project is situated on Lake Mackay in Western Australia, the largest undeveloped potash-bearing salt lake in the world. Agrimin is aiming to be a global supplier of specialty potash fertilisers to both traditional and emerging value-added markets. Agrimin's shares are traded on the Australian Securities Exchange (ASX: AMN).

Forward-Looking Statements

This ASX Release may contain certain "forward-looking statements" which may be based on forward-looking information that are subject to a number of known and unknown risks, uncertainties, and other factors that may cause actual results to differ materially from those presented here. Where the Company expresses or implies an expectation or belief as to future events or results, such expectation or belief is expressed in good faith and believed to have a reasonable basis. Forward-looking information includes exchange rates; the proposed production plan; projected brine concentrations and recovery rates; uncertainties and risks regarding the estimated capital and operating costs; uncertainties and risks regarding the development timeline, including the need to obtain the necessary approvals. For a more detailed discussion of such risks and other factors, see the Company's Annual Reports, as well as the Company's other ASX Releases. Readers should not place undue reliance on forward-looking information. The Company does not undertake any obligation to release publicly any revisions to any forward-looking statement to reflect events or circumstances after the date of this ASX Release, or to reflect the occurrence of unanticipated events, except as may be required under applicable securities laws.
