NODESTREAM LIVE LAUNCH

June 5, 2024: Harvest Technology Group Limited (ASX:HTG) (**Company, Harvest, Group**) is proud to announce the launch of **Nodestream™ Live**.

After a very successful beta test programme (where it was known as AVRLive Cloud), **Nodestream™ Live** is now ready to revolutionise remote video monitoring.

Nodestream™ Live is a cutting-edge cloud-based software designed to streamline and enhance remote video monitoring in bandwidth-constrained environments. This revolutionary platform enables you to aggregate video feeds from various sites and devices into a single, easy-to-manage system. It supports streaming up to 16 channels of video per encoding device from as low as 500kbps, ensuring unparalleled situational awareness even where network availability has previously limited video streaming.

With a user-friendly interface, a browser-based platform for simple deployment, and compatibility with most industry-accepted video formats, Nodestream™ Live facilitates rapid, secure sharing of content with key stakeholders. Additionally, Nodestream™ Live includes advanced PTZ (Pan-Tilt-Zoom) camera control, allowing operators to adjust the camera angle and zoom remotely, providing precise control over the video surveillance area and enhancing the flexibility of monitoring operations.

Benefits of Nodestream™ Live:

- Low-cost Monitoring and Situational Awareness Solution: Deliver top-tier video monitoring cost effectively.
- Rapid Response and Impact Minimisation: Quickly react to critical or emergency events, reducing operational and reputational impact.
- Instant Operational Insight: Gain a clear and immediate understanding of your current operations.
- Informed Decision-Making: Make smarter decisions with real-time data and insights.
- Proactive Risk Management: Identify potential risks early and manage them proactively.
- Operational Efficiency: Spot and address bottlenecks, inefficiencies, or disruptions swiftly.
- Compliance Assurance: Ensure your operations comply with legal and safety requirements.

ASX Code: HTG

Standout Features of Nodestream™ Live:

- High-Efficiency Streaming: Stream up to 16 channels of high-quality video from as low as 500kbps.
- User-Friendly Interface: Enjoy a simple user interface for seamless operation.
- Satellite Network Optimisation: Perfect for survivability on satellite networks.
- Broad Compatibility: Works with most industry-accepted video formats.
- Advanced Camera Control: Leverage advanced PTZ (Pan-Tilt-Zoom) camera control on ONVIF-enabled devices.
- Robust Security: Benefit from end-to-end security and encryption.
- Instant Video Sharing: Securely share video with key stakeholders instantly.
- Customisable Settings: Adjust bandwidth, frame rate, and latency settings to suit your needs.
- Purpose-Built for Low Bandwidth: Optimised for low bandwidth environments.
- Live Recording Capability: Record live video streams effortlessly.
- Private Network Deployment: Can be deployed on private networks for maximum security.
- Rapid Deployment: Deploy quickly to any location, with minimal installation downtime.
- Network Agnostic: Operates across any existing network using minimal bandwidth.

Harvest Technology Group's CEO, Ilario Faenza, stated:

"I am very proud of the team for their focussed effort to deliver our first software only offering. The launch of Nodestream Live is a significant milestone for the company with many customers having participated in the beta trials, ensuring we have delivered a solution customers actually want and need. This product is expected to significantly improve our speed to market by enabling customers to rapidly trial our products and then seamlessly move to production, I see this as a key asset for securing Enterprise and Government clients worldwide. As a software based solution, the gross margin is expected to be > 80%, approximately double compared to our hardware based solutions. We are currently working with our major customers to execute Enterprise Licence Agreements and while the dollar amount of expected sales for Nodestream Live cannot be quantified at this time, it is expected to be material, and the Company will provide further guidance as we execute material customer contracts."
