

Quarterly report and activity statement

3 months to 30 September 2024

Highlights

Ionic adsorption clay rare earth project in Tasmania

Signed Memorandum of Understanding with Ucore, to discuss a binding offtake agreement and potential investment by Ucore into ABx

Awarded an Exploration Drilling Grant Initiative (EDGI) grant from Mineral Resources Tasmania, which provides for up to \$70,000 for half of the drilling costs for a drilling program at the EL27/2022 exploration tenement

Production of hydrogen fluoride and aluminium fluoride from aluminium smelter waste (ALCORE)

Achieved maximum of 97% fluorine recovery, an increase over the previous best of 93%

Commercial discussions are being finalised with strategic investors, including locating the continuous pilot plant at an alternative, superior site

Bauxite operations (Queensland and Tasmania)

Negotiations are continuing with multiple potential offtake partners for potential long term supply contracts from Binjour, Queensland

For the DL130 Bauxite Project in Tasmania, a response is being prepared to the Request for Additional Information issued by the EPA

Corporate

Mr Paul Lennon AO retired from his position as Non-Executive Chair, including his Chair position on the Company's 83%-owned subsidiary ALCORE Limited, and was replaced by Ms Joycelyn Morton

ABx Group Limited (ASX: ABX) is a uniquely positioned Australian company delivering materials for a cleaner future.

Rare Earths: Signed Memorandum of Understanding with Ucore

- ABx executed a Memorandum of Understanding (MOU)¹ with Ucore, a Canadian public company with a patent-pending rare earth separation technology, RapidSX™. The MOU describes how:
 - ABx and Ucore will work toward a binding offtake agreement for the supply of an intermediate rare earth product, which is envisaged to be a mixed rare earth carbonate (MREC), by ABx to Ucore. The intent is for Ucore to obtain 'first right of refusal' for 50% of ABx annual volume for a minimum period of five years, subject to the agreement of commercial terms;
 - The parties will explore potential investment by Ucore into the ABx rare earth project as well as project finance opportunities for the ABx and Ucore projects, which may involve joint approaches to companies active in the rare earth value chain, governments, institutional funds, and private investors;
 - ABx and Ucore will collaborate to develop and optimise:
 - a comprehensive product flowsheet considering where best to implement collective project efficiencies; and
 - a total project development strategy, including laboratory, pilot, and demonstration plant testing.
- ABx conducted a 37-hole drilling campaign at the Company's Deep Leads project, located approximately 45 km west of Launceston, Tasmania². This area was directly northwest of the high-grade Deep Leads discovery. All assay results were received and several intercepts were considerably thicker than usual and extend ABx's REE mineralisation across the plateau.³
- ABx was awarded an Exploration Drilling Grant Initiative (EDGI) grant from Mineral Resources Tasmania, with the grant deed to be finalised. This provides for up to \$70,000 for half of the drilling costs for a drilling program at the EL27/2022 exploration tenement, located near Launceston and 52 km east of ABx's major Deep Leads / Rubble Mound REE project.
- Applications for two exploration leases are in progress, including EL25/2022 covering the 16 km extension from Deep Leads / Rubble Mound to the Wind Break REE discovery area
- in-house desorption tests were conducted
- Discussions continued with a number of potential customers in North America and Europe for an ABx mixed rare earth carbonate (MREC) product. The discussions highlighted the particularly acute supply risks for dysprosium and terbium.

² ASX Announcement, 15 July 2024

³ ASX Announcement, 7 August 2024

Rare Earths Strategy

Rare earths have many applications in a wide variety of industries. Permanent magnets are the most valuable application, representing over 90% of the total value of rare earths demand. Permanent magnets are used in electric vehicles, wind turbines, smartphones and military applications. The four most important rare earths for permanent magnets are neodymium (Nd), praseodymium (Pr), dysprosium (Dy) and terbium (Tb). The demand for these four rare earths is predicted to grow significantly in coming years, potentially leading to significant supply shortfalls. The supply risk is highest for dysprosium and terbium, the two heavy rare earths in permanent magnets.

Globally, most rare earths are sourced from mineral deposits. These typically require large, costly processing plants and a significant lead time to reach production.

An alternative source of rare earths is clay-hosted deposits. These typically contain a mixture of ionic adsorption clay (IAC, the ionic component) and a non-ionic component. The relative proportions of each in different deposits varies enormously. The rare earths in the ionic component can be leached using a low-cost desorption process, which produces a solution containing rare earths that is subsequently precipitated into a mixed rare earth carbonate (MREC). Industry processing experts indicate that it is very difficult to economically extract rare earths from the non-ionic component. Thus it is critical to have a high ionic proportion.

The other major advantages of ionic adsorption clay deposits are:

- Higher proportion of heavy rare earths compared to mineral deposits
- Low concentrations of radioactive elements such as uranium and thorium
- Typically exist at shallow depth

These advantages mean that:

- The minimum viable project for an ionic adsorption clay project is typically significantly smaller than for a mineral project. Crucially, this means that considerably less capital, time and risk is typically required to deliver a cash-flow positive ionic adsorption clay project compared to a mineral project
- The basket price for a concentrate from an ionic adsorption clay deposit is typically higher than one from a mineral deposit.

Ionic adsorption clay deposits have historically been mined only in southern China.

ABx is the first company to discover rare earths in Tasmania (Figure 1) and has reported a JORC-compliant mineral resource of 89 million tonnes⁴ at its Deep Leads - Rubble Mound and Wind Break deposits.⁵ The resource contains 36 ppm DyTb,⁶ the highest of any clay-hosted rare earths

⁴ 41 Mt inferred, 42 Mt indicated and 6 Mt measured

⁵ ASX Announcement, 2 May 2024

⁶ DyTb = Dy₂O₃ + Tb₄O₇

resource in Australia and one of the highest in the world. This contributes to a higher basket price. Furthermore, the level of radioactive elements is very low (2 ppm U_2O_3 and 6 ppm ThO_2).

ABx engaged Australian Nuclear Science and Technology Organisation (ANSTO) to conduct desorption tests, which found the highest extractions under relatively neutral conditions reported from any clay-hosted resource in Australia,^{7,8} which means that the ABx resource has the highest ionic proportion of any clay-hosted rare earths resource in Australia.

The ABx rare earth deposits are located in accessible forest plantations near highways, ports, railways, airports, grid hydropower and major towns.

The ABx strategy is to produce a mixed rare earth carbonate that can be sold to rare earth separation plants, for conversion into separated rare earth oxides. Numerous discussions with potential customers and investors have confirmed the particular strengths of the ABx rare earth deposits:

- High levels of dysprosium and terbium
- High ionic component
- Located in Australia

The next stages of the project are:

- Further exploration, primarily to identify the preferred initial mining location
- Metallurgical studies, to develop an understanding of the parameters that affect the performance of each process step (desorption, impurity removal and precipitation)
- Developing a preferred process and initial cost model

ALCORE: achieved 97% fluorine recovery using bath pilot batch reactor

- Rigorous investigation of process conditions continued using the bath pilot batch reactor, which had been commissioned in October 2023.⁹ The latest reactor results have seen ALCORE achieve 97% fluorine recovery¹⁰, improving upon the previous best of 93%, a result which was already deemed very likely to be sufficient in a commercial plant.¹¹
- This headline 97% recovery was delivered using the bath pilot batch reactor followed by further manual processing of some product material in a separate furnace. In the Company's latest test run, the bath pilot batch reactor delivered 85% fluorine recovery – the highest achieved from a single stage. The continuous pilot plant reactor will incorporate the two-stage design and will operate under similar processing conditions.
- An extensive literature review revealed a number of options for further processing and sale of the metal sulfate products.
- Commercial discussions are being finalised with strategic investors, including locating the continuous pilot plant at an alternative, superior site, instead of the ALCORE Technology Centre on the NSW Central Coast. Ordering of continuous pilot plant reactors is being deferred until those commercial discussions are finalised.

ALCORE Strategy

Hydrogen fluoride is an essential chemical for the production of fluorocarbons and aluminium fluoride. Aluminium fluoride is an essential chemical for aluminium metal production. Fluorine was added to Australia's critical minerals list in 2023.

Hydrogen fluoride is mainly produced from fluorspar, which is obtained from the mineral fluorite. Fluorspar is relatively high cost and has been identified as a critical material by the USA, Europe, Japan and Canada.

Australia does not mine any fluorite, or produce any fluorspar, hydrogen fluoride or aluminium fluoride, and so must import all its requirements. The Australian demand for hydrogen fluoride is small, and it is imported at high cost. Conversely, Australia is a significant producer of aluminium and so its demand for aluminium fluoride is high.

Australia is the largest producer of primary aluminium metal without its own domestic aluminium fluoride production, so Australian aluminium smelters rely entirely on imported aluminium fluoride, typically more than 80% from China. The average aluminium fluoride price (FOB China) has been more than US\$1,350/t for the past two years.

Most modern aluminium smelters produce excess bath, for which the only meaningful market is new smelters, which require bath to commence operations. Aluminium industry forecasts suggest that the global bath market will increasingly be in surplus, because far fewer new smelters are being constructed. All the major global aluminium producers are eager for alternative applications for excess bath, to avoid the unpalatable options of on-site storage or landfill.

ALCORE has developed a world-first process to produce industrial chemicals from aluminium smelter bath waste. The major products are hydrogen fluoride and metal sulfates. The hydrogen fluoride is combined with aluminium hydroxide to produce aluminium fluoride via an existing commercial process. The combined approach is illustrated in Figure 3.

ALCORE intends to construct commercial hydrogen fluoride and aluminium fluoride plants in Bell Bay, Tasmania. In 2022, ALCORE received a \$7.6 million grant from the Australian Government's Modern Manufacturing Initiative (MMI) to support the project.¹²

The process to produce hydrogen fluoride has been operated at pilot scale in a batch reactor. The next stage is to construct and operate a bath continuous pilot plant, the outcomes of which will be:

1. Selection of reactor designs and process conditions for the commercial plant
2. Production of saleable hydrogen fluoride for evaluation by customers

The metal sulfates can potentially be sold as a single industrial chemical, or further processed into multiple industrial chemicals. A range of options is being assessed.

¹² ASX Announcement, 29 April 2022

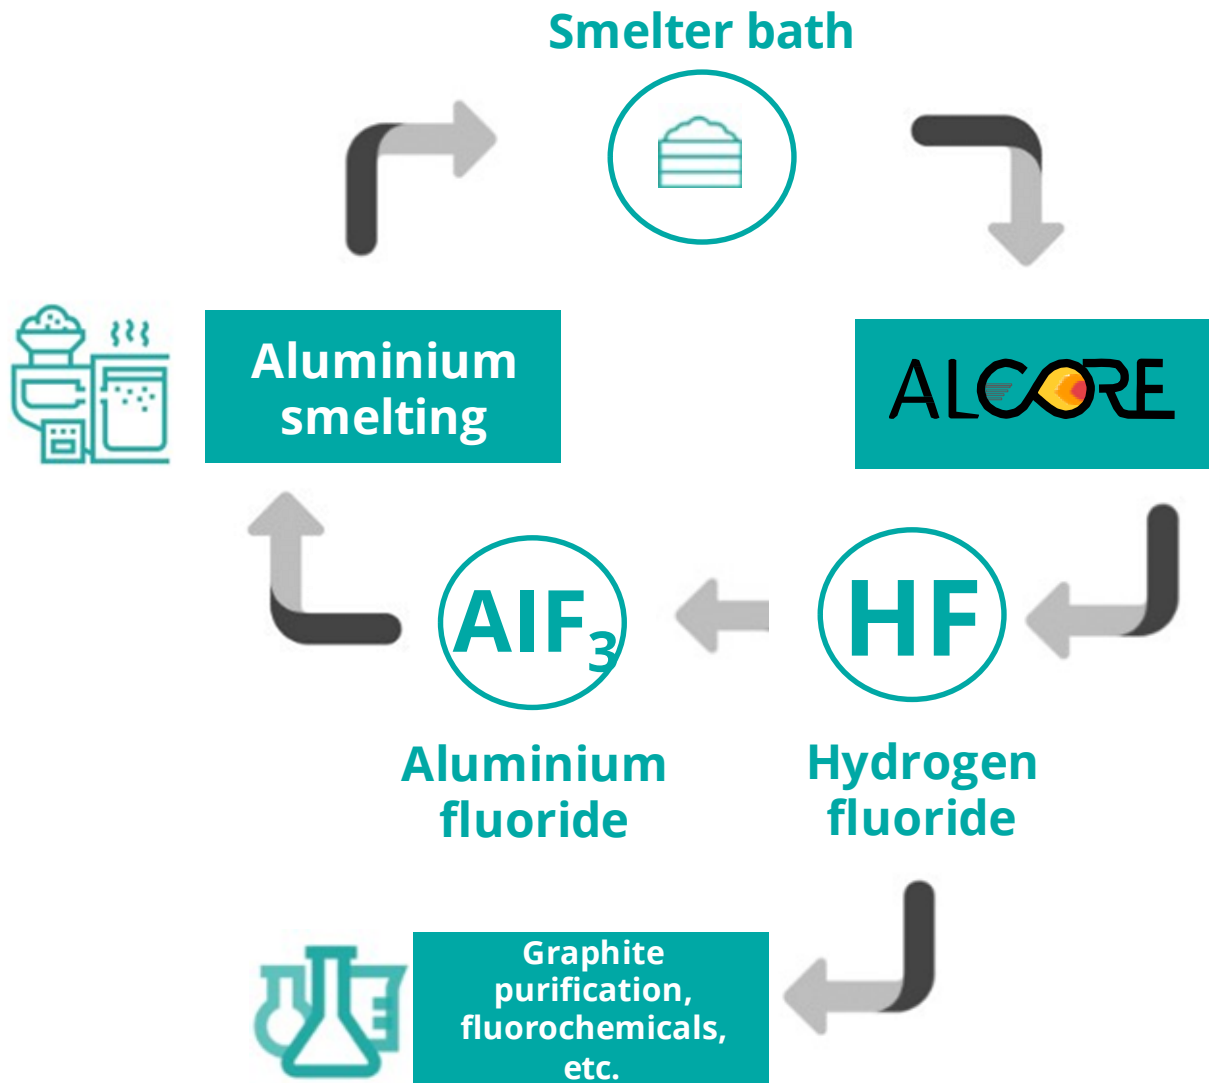

Figure 3: Circular economy approach of recycling aluminium smelter bath into aluminium fluoride

Bauxite Operations

Sunrise Bauxite Project: Binjour, Queensland

- Application for a standard environmental authority (EA) for Mine Lease 100277 was submitted to the Department of Environment, Science, and Innovation.
- The Queensland Government approved a \$7,500,000 upgrade of the Biggenden Railway Crossing (overpass removal). This initiative will significantly improve regional freight efficiency and project route logistics.
- The Port of Bundaberg has commenced operations of its multi-use conveyor. This is designed for a variety of bulk minerals, providing additional bauxite export capability and options for the project.

DL130 Bauxite Project: Tasmania

- Following public submissions to the planning permit application advertised by the Meander Valley Council, the EPA issued a Request for Additional Information. The main requirements are a Dust Management Plan and Stormwater Management Plan, which are being prepared. The Stormwater Management Plan also required some additional environmental testing, which has been completed
- ABx held two community drop-in sessions in Westbury and Deloraine, where management and staff were available to answer any questions from the community.

Bauxite Strategy

The ABx strategy is to selectively produce metallurgical grade, cement grade and fertiliser grade bauxite, with a focus on profitability. ABx bauxite can substantially improve the properties of superphosphate fertiliser.

The largest project is the Sunrise Bauxite Project in Queensland, with a JORC compliant resource of 37 million tonnes, supporting 20-25 years production. It is anticipated that the mine will export 500,000 tonnes per year of metallurgical grade bauxite in its first year of production, then scale up to full operational capacity of 1.5 million tonnes per year.

In February 2022, ABx entered a JV with Alumin for the development of the Sunrise Bauxite Project, comprising a bauxite mine at Binjour and port operations at Bundaberg.¹³ Alumin is an Australian special purpose vehicle company associated with our strategic marketing partner, Rawmin India, having extensive experience in funding long term sustainable investments in projects involving mining and bulk-shipping of metallurgical grade bauxite to end users around the world.

Alumin is continuing negotiations with multiple interested parties to secure long-term offtake agreements, reflecting the growing global demand for bauxite and the limited number of options for new supply. Project investment is likely to be contingent on securing

¹³ ASX Announcement, 28 February 2022

offtake agreements. Once investment is secured, full project activities will commence. As such, the projected operational commencement has been revised to late 2025 / early 2026.

In Tasmania, ABx has three bauxite deposits and has previously mined at Bald Hill near Campbell Town. ABx plans to recommence bauxite mining at the DL130 Bauxite Project and assessment of the mine lease application by Meander Valley Council, the EPA and Mineral Resources Tasmania is in progress. The primary products are likely to be cement grade and fertiliser grade bauxite. In September 2023, an agreement was executed with Adelaide Brighton Cement Limited (ABCL), a subsidiary of Adbri Limited (ASX:ABC), for the supply of cement-grade bauxite to ABCL's Birkenhead cement manufacturing operation in South Australia.¹⁴ The agreement forecasts supply of 90,000-120,000 tonnes of bauxite over a five-year term. Bauxite production was expected to commence in Q4 2024 but, due to the request for additional information issued by the EPA, is now expected to be Q1 2025.

Corporate

Retirement of Paul Lennon and Appointment of Ms Joycelyn Morton as Chair

Mr Paul Lennon AO retired from his position as Non-Executive Chair, effective 30 September 2024, including his Chair position on the Company's 83%-owned subsidiary ALCORE Limited¹⁵.

Ms Joycelyn Morton was appointed Non-Executive Chair of ABx and ALCORE. Ms Morton was appointed to the ABx Board in April 2024¹⁶ and in a short time has demonstrated her leadership and experience, and acquired a deep understanding of the strengths and opportunities for ABx.

Mr Rex Adams has resigned from his position as non-executive director of the Company's 83%-owned subsidiary ALCORE Limited, effective 31 October 2024. Mr Adams was an inaugural director of ALCORE from 2018, and provided wise guidance to the development of the technology over the past six years.

Updated rare earths and ALCORE presentations have been placed on the ABx website www.abxgroup.com.au.

This announcement is approved for release by the board of directors.

Qualifying statements

General: The information in this report that relate to Exploration Information and Mineral Resources are based on information compiled by Jacob Rebek and Ian Levy who are members of The Australasian Institute of Mining and Metallurgy and the Australian Institute of Geoscientists. Mr Rebek and Mr Levy are qualified geologists and Mr Levy is a director of ABx Group Limited.

Mainland: The information relating to Mineral Resources on the Mainland was prepared and first disclosed under the JORC Code 2004. It has not been updated since to comply with the JORC Code 2012 on the basis that the information has not materially changed since it was last reported. Mr Rebek and Mr Levy have sufficient experience, which is relevant to the style of mineralisation and type of deposit under consideration and to the activity, which they are undertaking to qualify as a Competent Person as defined in the 2004 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Rebek and Mr Levy have consented in writing to the inclusion in this report of the Exploration Information in the form and context in which it appears.

Tasmania: The information relating to Exploration Information and Mineral Resources in Tasmania has been prepared or updated under the JORC Code 2012. Mr Rebek and Mr Levy have sufficient experience, which is relevant to the style of mineralisation and type of deposit under consideration and to the activity, which they are undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Rebek and Mr Levy have consented in writing to the inclusion in this report of the Exploration Information in the form and context in which it appears.

The information relating to the latest REE Resources update is extracted from the report entitled "ABx Rare Earth Resources Increase 70% to 89 Million Tonnes" dated 2 May 2024 and is available to view on <https://www.abxgroup.com.au/site/investor-information/asx-announcements>.

The Company confirms that it is not aware of any new information or data that materially affects the information included in the company's market announcements and, in the case of estimates of Mineral Resources or Ore Reserves, that all material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed.

The Company also confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcements.

Disclaimer Regarding Forward Looking Statements

This ASX announcement (Announcement) contains various forward-looking statements. All statements other than statements of historical fact are forward-looking statements. Forward-looking statements are inherently subject to uncertainties in that they may be affected by a variety of known and unknown risks, variables and factors which could cause actual values or results, performance or achievements to differ materially from the expectations described in such forward-looking statements.

ABx does not give any assurance that the anticipated results, performance or achievements expressed or implied in those forward-looking statements will be achieved.

Patent

Refined Ore Industries Ltd (ROIL) was the owner of the CORE process technology via ROIL's intellectual property company, Berkeley Process Technologies Pty. Ltd which issued a global exclusive licence for the aluminium-related portion of the CORE process technology to ABx in November 2017 and ABx has issued a global exclusive sub-licence to ALCORE when ALCORE was incorporated on 1 July 2018.

After a company restructure and expansion of the patent definition to cover isolation and extraction of mineral compounds, metals, metalloids, alloys and elements from waste streams, mineral ores, recyclable commodities, industrial by-products and mixed substances, the holding company is now named Core Refining Limited (CRL) and the intellectual property company is Core Intelligence Australia Pty Ltd (CIAL) which holds the Patent Application No. 2019904311 and the global exclusive licences to ABx and ALCORE continue in force.

CRL's CORE process technology involves the refining of a wide range of ore types using a combination of fluorine acids and related thermal energy process steps. The technology that is licensed to ABx and ALCORE by CRL is part of CRL's broader Core technology.

5.2	Call deposits	40	40
5.3	Bank overdrafts	-	-
5.4	Other	-	-
5.5	Cash and cash equivalents at end of quarter (should equal item 4.6 above)	464**	438**

** As at end of current quarter, in addition to the cash and cash equivalent of \$464k (End of previous quarter: \$438k), the company has access to \$3.57 million (End of previous quarter: \$3.97 million) as held in trust.

6.	Payments to related parties of the entity and their associates	Current quarter \$A'000
6.1	Aggregate amount of payments to related parties and their associates included in item 1	120
6.2	Aggregate amount of payments to related parties and their associates included in item 2	-

Note: if any amounts are shown in items 6.1 or 6.2, your quarterly activity report must include a description of, and an explanation for, such payments.

Mining exploration entity or oil and gas exploration entity quarterly cash flow report

7. Financing facilities	Total facility amount at quarter end \$A'000	Amount drawn at quarter end \$A'000
<i>Note: the term "facility" includes all forms of financing arrangements available to the entity. Add notes as necessary for an understanding of the sources of finance available to the entity.</i>		
7.1 Loan facilities	-	-
7.2 Credit standby arrangements	-	-
7.3 Other (please specify)	-	-
7.4 Total financing facilities	-	-
7.5 Unused financing facilities available at quarter end		-
7.6	Include in the box below a description of each facility above, including the lender, interest rate, maturity date and whether it is secured or unsecured. If any additional financing facilities have been entered into or are proposed to be entered into after quarter end, include a note providing details of those facilities as well.	

8. Estimated cash available for future operating activities	\$A'000
8.1 Net cash from / (used in) operating activities (item 1.9)	181
8.2 (Payments for exploration & evaluation classified as investing activities) (item 2.1(d))	(525)
8.3 Total relevant outgoings (item 8.1 + item 8.2)	(344)
8.4 Cash and cash equivalents at quarter end (item 4.6)	464
8.5 Unused finance facilities available at quarter end (item 7.5)	-
8.6 Total available funding (item 8.4 + item 8.5)	464
8.7 Estimated quarters of funding available (item 8.6 divided by item 8.3)	1.35
<i>Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.</i>	
8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:	
8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?	
Answer: Yes, however as noted below in section 8.8.2 the Company can delay or scale down its activities as required.	
8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?	
Answer: ABx is in ongoing discussions with potential strategic investors, which are highly prospective. The Company believes it is well positioned to raise additional cash under its existing placement capacity in accordance with ASX Listing Rule 7.1 and 7.1A. Further the Company has significant flexibility: <ul style="list-style-type: none"> • to access advanced funding against FY24 research and development tax incentives if required; • to delay or scale down ABx's exploration activities and expenditure; and • meeting its obligations by either farm-out or partial sale of the Company's exploration interests to ensure alignment to its prevailing cash positions.	

Mining exploration entity or oil and gas exploration entity quarterly cash flow report

8.8.3 Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?

Answer: Yes, the entity expects to be able to continue to meet its operations and meet its business objectives as a result of the actions contemplated in items 8.8.1 and 8.8.2 above.

Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.

Compliance statement

- 1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.
- 2 This statement gives a true and fair view of the matters disclosed.

Date: 31 October 2024

Authorised by: By the Board
(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg Audit and Risk Committee]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
