

Adherium and AMC Health Join Forces to Advance Digital Health for Improved Respiratory Care

Highlights:

- Adherium has secured a signature partnership with AMC Health, a long-time digital health and virtual care solutions leader.
- The partnership will support a wide network of AMC Health clients, including large insurance payers (such as Blue Cross Blue Shield, Optum, and United Healthcare) and healthcare providers, by enabling scalable, data-driven interventions.
- Adherium's Hailie® technology empowers patients to take control of their asthma and COPD - addressing avoidable healthcare costs by engaging patients in their chronic disease management with medication reminders and adherence analysis.

Melbourne, Australia – 5 December 2024 - [Adherium Limited](#) (ASX:ADR), a global leader in digital inhaler technology, and AMC Health, an established leader in digital health and virtual care, today announced a strategic partnership to support patients managing chronic respiratory diseases.

This partnership will empower patients to manage their conditions through medication reminders, adherence analysis, and real-time monitoring. By integrating Adherium's state-of-the-art Hailie® sensors with AMC Health's digital solutions, healthcare providers will gain actionable insights for proactive care management.

Adherium's Hailie® technology goes beyond adherence monitoring by analysing inhaler technique and inspiratory flow, providing personalised feedback to patients and clinicians to optimise treatment.

Adherium Chairman, Lou Panaccio, commented: *"We are excited to work with AMC Health to deliver impactful digital health solutions to respiratory patients. Our partnership reflects a shared commitment to improving health outcomes by equipping providers and payers with the data they need to support adherence and treatment."*

AMC Health is committed to reshaping healthcare delivery with solutions that break barriers to care and enhance quality. Its digital and clinical services bridge communication gaps, enabling patients to manage chronic conditions from the comfort of their homes while maintaining strong connections with their care teams.

AMC Founder and CEO, Nesim Bildirici, added: *"Partnering with Adherium is an exciting opportunity to bring innovative digital solutions to respiratory care, empowering providers and payers alike with real-time insights and equipping*

ASX Release

patients to take control of their health. Together, we are advancing a shared vision of improving adherence, driving better health outcomes, and making a meaningful difference for respiratory patients worldwide.”

AMC Health has received nearly 30,000 candidates for pulmonary monitoring, and currently manages the health of nearly 10,000 of those patients. With the advanced capabilities offered through Adherium’s Hailie® technology, AMC anticipate significant expansion of their COPD and Asthma programs.

This collaboration marks a significant step forward in healthcare innovation, paving the way for improved efficiency, precision, and patient-focused solutions. It highlights Adherium’s commitment to harnessing advanced technology to elevate care standards and optimise outcomes in respiratory health.

About Adherium (ASX: ADR):

Adherium is a provider of integrated digital health solutions and a worldwide leader in connected respiratory medical devices, with more than 180,000 sold globally. Adherium’s Hailie® platform solution provides clinicians, healthcare providers and patients access to remotely monitor medication usage parameters and adherence, supporting reimbursement for qualifying patient management. The Hailie® solution includes a suite of integration tools to enable the capture and sharing of health data via mobile and desktop apps, Software Development Kit (SDK) and Application Programming Interface (API) integration tools, and Adherium’s own broad range of sensors connected to respiratory medications. Adherium’s Hailie® solution is designed to provide visibility to healthcare providers of medication use history to better understand patterns in patient respiratory disease.
