ASX Release: 28 April 2025

AEERIS LTD 28 April 2025

New Aeeris Technology Launch Strengthens Insurance Industry Leadership

Aeeris Ltd (**Aeeris** or the **Company**) is pleased to announce the launch of EmbargoPlus, its latest premium service offering that reinforces the Company's position as one of Australia's leading providers of weather intelligence and operational risk management solutions. Available exclusively through the Company's wholly owned subsidiary, Early Warning Network, this innovative product delivers unmatched capabilities to industries managing weather-related operational and financial risks.

EWN's Embargo services deliver advanced, real-time intelligence on catastrophic severe weather events and natural hazards, enabling customers to proactively identify impacted areas and implement strategic planning and risk mitigation measures ahead of time. EmbargoPlus is specifically engineered for insurers requiring real-time embargo management for new policy quote requests or the maintenance of internal embargo records within existing systems. Building on over a decade of experience in embargo services and through extensive collaboration with industry stakeholders to directly address the evolving needs of the insurance sector, EmbargoPlus introduces enhanced capabilities that will ensure continued growth with Aeeris's largest industry sector.

Key Features Include:

- Real-time address lookup leveraging Australia's official National Address Database (GNAF)
- Advanced policy engine with comprehensive embargo alert information
- Sophisticated threat event investigation tools for risk validation
- Seamless API integration ensuring real-time embargo synchronisation and long-term system compatibility
- Enterprise-grade reliability and accuracy to meet critical operational demands

A key enhancement in EmbargoPlus is its real-time integration with the Geocoded National Address File (**GNAF**), Australia's authoritative, government-maintained database of verified physical addresses. By using GNAF, EmbargoPlus ensures that insurers have the most accurate and up-to-date location information available, allowing them to instantly validate whether a policy location is subject to an embargo and preventing costly errors such as policy issuance in embargoed areas

In addition, Aeeris is delighted to announce the successful onboarding of two major insurers, with full integration set to complete in Q4 2025. This achievement highlights strong industry demand and the rapid market adoption of EmbargoPlus, further strengthening the Company's growing influence and reputation as an innovation leader.

EmbargoPlus represents a strategic advancement in Aeeris's growth trajectory, strengthening the Company's recurring revenue model. As a subscription-based service, it augments Aeeris's capacity to deliver sustained shareholder value through scalable, technology-driven solutions. While optimised for insurers, the platform's versatility extends to logistics companies and other industries requiring precise embargo-related insights.

The launch has already generated substantial interest from industries dependent on accurate and timely risk data, validating the market's demand for sophisticated embargo management solutions.

Kerry Plowright, CEO of Aeeris, commented: "EmbargoPlus marks a significant milestone in our mission to empower insurers with smarter, faster decision-making capabilities through real-time data and purpose-built tools. This platform exemplifies our commitment to addressing complex challenges through innovation and collaboration, driving both industry impact and shareholder value. The robust API integration ensures seamless connectivity with insurers' existing systems, creating long-term partnerships that will fuel our continued growth in the insurance sector."

This announcement has been approved and authorised for release by the Board of Aeeris Ltd.
