¹ Cash NPAT provides a more accurate representation of the underlying profitability of the business, adjusting for the impact of non-cash items, most significantly the movement in expected credit loss provision, which is a non-cash provision for credit losses that may occur in future financial years from the existing loan book. With GAAP requiring recognition of an expected credit loss provision expense immediately on origination of a new loan, without any indication of loan impairment and significantly ahead of recognition of the interest income priced to compensate for the expected level of credit loss risk, the expected credit loss provision expense will suppress statutory net profit during periods of loan book growth, all other things being equal.
