“My first few months leading Otto has been a busy period getting to know our assets and building relationships with our joint venture partners and shareholders. Otto has a great team, and I am looking forward to continuing to work with them to deliver on the significant value that the Company’s production assets clearly hold.

Backed by both strong production and a robust balance sheet, I am fully focused on the delivery of Otto’s strategy of maximizing the cashflow receipts from these assets to the benefit of shareholders.

This Quarter’s free cash flow of US\$2.0 million demonstrates the strength and consistency of our assets.

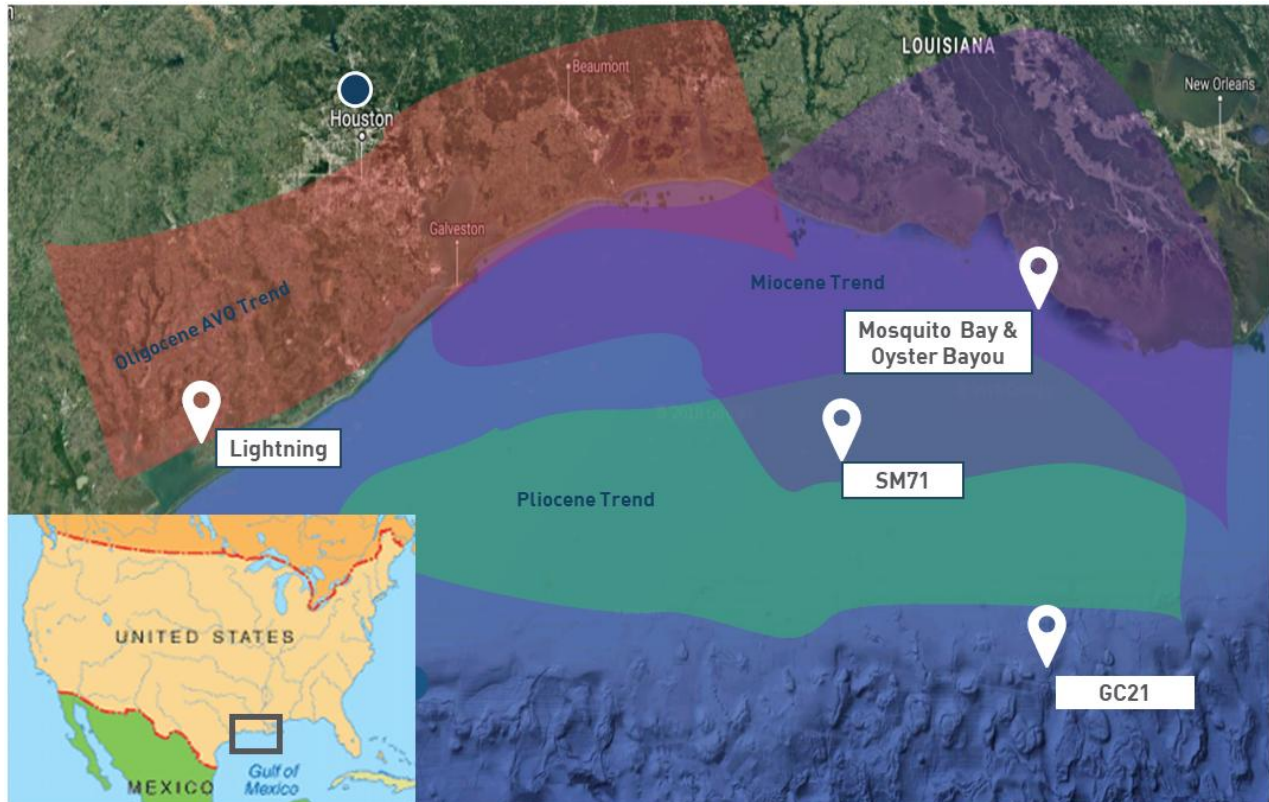

I look forward to meeting many of our shareholders at the Company’s AGM in Perth in late November.”

Location:	Offshore Gulf of America Shelf
Status:	Producing
Water Depth:	137 feet
Otto WI/NRI:	50.0%/40.6% (Byron Energy Inc. – Operator)

During the quarter, on a WI basis, SM 71 produced approximately 32.1 Mboe, or 349 Boe/d (-5% Mboe or -6% Mbod/d from prior quarter). Production for the previous quarter averaged 373 Boe/d. The decrease in overall production was due to lower gas production attributable to the F-5 well being shut in and only used intermittently to provide gas lift for the F1 well (-74% from prior quarter). The gas production decrease was partially offset by an 8% increase in oil production with less downtime recorded in the September quarter (1 day shut-in during the September quarter vs 4-day shut-in for the June quarter).

The F1 well production rate has stabilized after placing the well on continuous gas lift. For the quarter ended 30 September 2025, the F1 well averaged 656 bbl/d (8/8ths) compared to 607 bbl/d (8/8ths) the prior quarter.

The F2 well remained producing for the quarter at an average of 17 bbl/d (8/8ths).

The F3 well remained predominantly shut-in for the quarter.

The F-5ST well was shut-in at the beginning of March as it produced only gas and appeared to be adversely affecting the F-1, however the well continues to be used intermittently to provide gas lift for the F1 well with positive results.

On a WI basis, revenue was up 5% over the previous quarter. The 5% decrease in overall production over the prior period noted above was characterized by slightly higher oil production and a 74% decrease in gas production combined with a 2% increase in average oil pricing and a 2% decrease in average gas prices.
