ACC has commissioned Geos Mining to undertake a conceptual prospectivity review of each tenement aimed at assessing the economic potential for metallurgical coal. Geos Mining concludes that The tenement package demonstrates differentiated exploration prospectivity, led by EPC 2386 (Cracow / Lonesome Creek), which

has been assessed as having a moderate to significant likelihood of containing potentially economic metallurgical coal and is therefore considered the highest-priority tenement. EPC 2421 (Cracow West), while assessed as prospective for thermal coal only, is considered to provide potential development synergies due to its proximity to EPC 2386. EPC 2387 (Biloela South) and EPC 2432 (Carnarvon) have been assessed as having low to medium metallurgical coal potential and benefit from relative proximity to existing infrastructure. Further exploration and detailed review of historical data would be required to confirm prospectivity and support any future development.

#### **ASF Technologies (Australia) Pty Ltd ("ASFTA")**

ASFTA is an Australian company that has developed a flat opposed cylinder boxer-type engine that uses patented Scotch Yoke mechanisms giving the engine advantages in weight, length, width, height, vibration and emissions over other conventional engines in its class.

ASFTA's Scotch Yoke engine was originally developed over 20 years ago and tested at the time by VW, Ford, Cosworth, and others. The engine has now refreshed its design, with 7 patents newly pending, and tested by FEV. The engine is the first successful 4 stroke Scotch Yoke engine to be specifically designed and developed for modern Hybrid and Range Extender vehicles and can achieve Euro 6d and China 6b emissions on China RON 92 fuel with minimum expensive add on technologies. The engine does not need Turbo charging, VVT, EGR or GDI to meet the European 6d or China 6b emission regulations.

In addition to new energy vehicles, the engine is easily adaptable for a range of power applications ranging from aviation use to home generator use. The engine is designed to be fuel agnostic and can run on Gasoline, LPG, CNG and Hydrogen. The engine achieved emissions that were better than Euro 6 and China 6b standards without expensive VVT or EGR technology and passed a 1000hr durability test that is 2.5 times the normal standard test requirement. Four patents have been granted for the US market with one patent granted for Europe and a second proceeding to grant. The patent portfolio is growing steadily.
