

## ASX ANNOUNCEMENT

7 April 2026

### ORBITAL UAV SECURES UAE STRATEGIC PROPULSION PARTNERSHIP AND ENGINE ORDER

PERTH, AUSTRALIA: Orbital Corporation Ltd ACN 009 344 058 (“**Orbital UAV**” or “**Company**”) is pleased to announce that it has secured an initial order from a new customer in the United Arab Emirates (“UAE”) for the supply of the Company’s 50HFE propulsion systems.

In addition, the sale includes the supply of Orbital’s proprietary Power Management Systems (PMS) for onboard electrical power generation.

The order is valued at USD 1.1 million and marks Orbital UAV’s entry into the Middle East, consistent with the Company’s continued expansion across key international markets. It is anticipated that the initial engine order will be completed by August 2026.

It follows six months of technical engagement and commercial discussions to secure the initial purchase. The customer is a Middle East sovereign Government, and the engines are for a military application.

Orbital UAV has also entered into a Long-Term Distribution Agreement (LTA) under which the customer will become a UAV propulsion partner for the Company in the UAE, with the potential to include additional models across the Company’s full product range, including the 75HFE, 150HFE and 350HFE propulsion systems.

#### Comment from the CEO

Stephen Pearce, Chief Executive Officer of Orbital UAV, said:

*“Securing this initial order for 50HFE engines with a new customer in the UAE is an important milestone for Orbital UAV and reflects the continued international interest in our propulsion solutions.”*

*The Company has existing customers in North America, Europe, India, Southeast Asia and Australia, and this order establishes an initial customer position in the Middle East”.*

*The LTA is consistent with the Company's strategy of building long-term partnership programs through initial supply, followed by expanded engine sales and an ongoing in-service support revenue stream.*

*The Company is seeing renewed interest in the smaller engines within its product range. Orbital UAV has previously sold more than 1,000 of the 50HFE engines to Boeing Insitu, and the engine has a strong operating history with an estimated 250,000 hours of mission flight time.*
